Mobinets is an innovative provider of Next Generation OSS software products and solutions to mobile network operators around the world. The company products support telecommunications service providers’ processes such as maintaining network inventory, provisioning services, configuring network components, and managing faults. This eliminates the need for multiple databases and spreadsheets to manage network inventory, and creates a common source of truth across operators’ core, access and backhaul networks. The company was incorporated in Lebanon in 2003, it serves 12 network operators from 5 points of presence globally. For more information, contact Mobinets at www.mobinets.com
