Innovative solutions in healthcare delivery to underprivileged populations are essential, especially gaps in access and equity. As the healthcare industry debates the most effective measures and ratings of health outcomes, it is crucial to develop strategies that prioritize quality measures, such as the value of care. Hospitals are not measuring quality measures sufficiently, which indicates that the implementation of training programs and the development of new policies is necessary to address this issue. The implementation of training programs and the development of new policies are also important for promoting a positive workplace environment, which includes reducing workplace violence and preventing burnout, stress, and depression among healthcare workers.

About the author: Kassem Kassak, PhD, MPH is core expert profile. Kassem has a PhD from the University of Minnesota in Health Services Research, Policy and Administration and an MPH from the University of San Francisco. He has experience as a core expert on various projects and initiatives, including the establishment of the Innovation and Leadership Institute (CLI) at the American University of Beirut. Kassem is a leader in the field of healthcare innovation and leadership, and has a background in research and policy development. He is also skilled in the areas of health inequality analysis, interpretation, and implementation of strategies to improve health outcomes. Kassem is currently the director of the Innovation and Leadership Institute (CLI) at the American University of Beirut and is involved in various projects and initiatives aimed at promoting innovation and leadership in healthcare.
