The necessity of achieving the right balance in the financing of healthcare systems is an equally important challenge to post-conflict rebuilding efforts. The authors underscore the importance of strengthening health care, and a mission of ensuring a more effective, equitable, and efficient response addressing the WASH needs of the community.

The researchers and the Innovative Entrepreneurs. The team also visited a Syrian refugee camp in Lebanon to better understand the real-world challenges faced by health workers in post-conflict and refugee camps. These visits allowed for the development of innovative solutions that could be implemented in the region. Over the course of the four days, the team met with the community. As a result of these interactions, several innovative ideas emerged. These ideas were then presented the last day to a panel of juries (Dr. Yassin, the Director, and other members of the university).

By the end of the workshop, the team had developed a plan to implement the identified solutions in the region, with the goal of improving health outcomes and addressing the needs of the community. The plan included the development of a mobile application to facilitate access to health information and support for patients, as well as initiatives to improve the training and capacity building of healthcare providers. The team also identified potential partnerships with other organizations and stakeholders to support the implementation of these initiatives.

Overall, the workshop was a success and highlighted the potential for innovative solutions to address the complex health systems challenges in the region. The team is now working on the implementation of the plan, with the aim of making a positive impact on the health of the community.
