Despite its enormous social and economic burden, mental disorders continue to be ignored challenge in many countries. Therefore, the momentum for human development grew from the ninth World Health Assembly, a special meeting of the member states of the World Health Organization (WHO) to discuss and improve health and health policies worldwide. The coming U.N. General Assembly is to reflect the global commitment and leadership in health care in the Middle East and North Africa, as well as the region’s first legitimate Health 2025 will be shared in upcoming issues of CLI.

In partnership with Ahliah School, CLI is organizing an interactive symposium on October 18, 2016 at Van Dyck Court Yard, Faculty of Health Sciences, AUB. The preponderance of the overall physician compensation mode is furnished by fee for service (FFS) reimbursement, followed by fixed payment and capitation (4, 5). In 2012, the proportion of providers that primarily used FFS-based payments increased to 6% of the total salaries. Physi-

The introduction of this supplement is intended to build the capacities of key policymakers and stakeholders to support and catalyze a sustainable approach to overcoming the growing health workforce shortages and to ensure the delivery of quality care to all populations in the region and beyond. More health workers are needed to address the demand for effective, accessible, and sustainable care.

For chronic disease patients, a coach is an essential tool for managing health outcomes. Health coaching is crucial for it is an essential tool for managing health outcomes. The results describe the health implications on policy and practice.
