**What are the secondary and exploratory objectives of our study?**

**Secondary Objectives:**

**Maternal outcomes**

1. Mean maternal 25(OH)D level, at delivery
2. Change in urine calcium at follow up (second visit compared to baseline) (spot urine or 24-hour collection)

**Neonatal outcomes**

1. Mean neonatal 25(OH)D level, at delivery
2. Mean Neonatal fat mass, at one month of age.
3. Mean neonatal Knee to heel length at birth

**Exploratory Objectives:**

**Maternal outcomes:**

1. The incidence of a composite outcome (C-section and gestational diabetes mellitus (GDM)) in a subgroup of women who has no previous C-section.
2. Mean maternal weight at delivery
3. Mean maternal BP at each OB-GYN visit
4. Mean maternal LDL, HDL and TG levels
5. Mean glucose and insulin levels at delivery
6. Mean number of ill days
