AUB held the Third Annual Open House for Graduate Studies

The American University of Beirut (AUB) successfully held its Third Open House for Graduate Studies. The event was hosted on AUB campus on February 4th, 2015.

It was attended by more than 340 participants from local, regional and international universities and companies. The unique event was a great opportunity to familiarize potential candidates with the Master’s and PhD degrees offered at AUB as well as the available student scholarships and related guidelines for application submission. Graduate Council held orientation with time and format to help new graduate students get acquainted with graduate and academic life at AUB

The event reflected the evolution of graduate affairs since GC’s inception as it featured new student led organizations and organizations with whom it has collaborated to improve graduate life and academics.

The 40 minute presentation program included words of welcome by Dean Talal Nizameddin and Dr. Rabih Talhouk (Chairperson of Graduate Council) followed by informative presentations by Graduate Council, the Office of International Programs (OIP), AUB Libraries, the Writing Center (WrC), Graduate Student Society (GSS) and one of its new subcommittees, Graduate Student Life Team in the Arts, Humanities, and Social Sciences (GSLT-AHSS). The talks were followed by an opportunity to meet the presenters and learn more about the activities and services offered. Read More

Physics PhD Program: Students and Faculty member share their experiences

The Department of Physics at AUB plays an important role in serving a large number of engineering, premedical, biology and computer science students. However, the beauty of physical science is revealed in the research work which needs time, a solid background, and good advising.

It is interesting to note that since the re-installment in 2002, the first two PhD degrees in the Department of Physics were earned by female students. This is very encouraging, especially since both results in first time achievements in Lebanon in the areas of High Energy Physics (HEP) and Astrophysics. In addition, several results from the thesis work of both students have been published in peer reviewed international journals of high reputation.

One thesis was completed by Ola Hosseiny Maleeb in the field of Supersymmetric Massive Gravity. The other thesis was completed by Ghina Mahmoud under the supervision of Dr. Mounib El Eid. The work of this thesis was concerned with the understanding of stellar structure and evolution using the elements produced in their interiors for which observations are available. In summary, the graduation of the above mentioned PhD students is a good first step for the Physics Department and AUB; more students will follow, among them three female students. Read More

2015 Biomedical Research Day shows graduate and post-graduate research to be thriving at AUB

Nearly 90 research projects were presented at the 5th Biomedical Research Day at AUB, which has staked its place as a platform for collaboration on interdisciplinary research.

Master’s and PhD students as well as postdocs presented the results of ongoing research projects addressing topics as diverse as developing virtual patients for medical school examinations, testing the anti-cancerous activity of plant extracts, nutrition and diet research, and bullying and other behavioral research.
