

Department of Biology

Chairperson:	Smith, Colin A.
Professors:	Baydoun, Elias H.; Darwiche, Nadine D.; Gali-Muhtasib, Hala U.; Knio, Khuzama M.; Kreydiyyeh, Sawzan I.; Talhouk, Rabih S.
Associate Professors:	Bariche, Michel J.; Saoud, Imad P.; Smith, Colin A.
Assistant Professors:	Ghanem, Noel D.; Jaalouk, Diana E.; Kambris, Zakaria S.; Osta, Mike A.; Sadek, Riyad A.
Lecturers:	Rizkallah, Hind D.; Sinno-Saoud, Nada; Tarraf, Charbel G.
Instructor:	Hajjar, Layane A.M.

The graduate program consists of an MS program in Biology and a PhD program in Cell and Molecular Biology.

The Graduate Record Examination (GRE) is required of all applicants for graduate work. Requirements for an MS degree in biology consist of a minimum of 21 credit hours in biology courses numbered 300 or above and a thesis.

The following courses are core courses and should be taken by all graduate students: BIOL 310 (3 cr.), BIOL 315 (3 cr.), and BIOL 393 (1 cr.) or BIOL 394 (1 cr.). Unless otherwise stated, only senior undergraduate biology majors with an average of 80 or above can register in biology graduate courses with the consent of instructor.

MS in Biology

- BIOL 310** **Quantitative Methods in Biology** **2.3; 3 cr.**
A course that emphasizes advanced statistical methods for biology; includes use of computers and some software and hardware applications in various fields in biology. *Prerequisite: graduate standing.*
- BIOL 315** **Research Methods in Biology** **1.5; 3 cr.**
A core course that provides practical experience in a variety of techniques currently employed in biological research, providing an understanding of their application and result interpretation. *Prerequisite: graduate standing.*
- BIOL 324** **Protein Structure and Function** **3.0; 3 cr.**
A course that covers the structure-function relationship of proteins, both as model systems and as part of biological systems, with special attention to current issues in protein science. Biophysical approaches, structure determination, protein engineering, protein folding, advance enzymology, and biological systems with which to study proteins are included.
- BIOL 328** **Plant Biochemistry** **3.0; 3 cr.**
A course that provides information in areas of biochemistry unique to plants, including that of the cell wall, photosynthesis, assimilation of mineral nutrients, natural products, and growth substances.

BIOL 362	Advanced Ecology	2.3; 3 cr.
A discussion and analysis of topics of current interest in ecology with emphasis on population and community dynamics; methods of ecological investigation and analysis; includes field work.		
BIOL 363	Population and Community Ecology	3.0; 3 cr.
A course that introduces the various models and theories of population dynamics and community structure, and their applications in assessing the complex interactions that occur in natural plant-animal systems as a result of long co-evolution, with an emphasis on chemical ecology.		
BIOL 364	Conservation and Restoration Ecology	3.0; 3 cr.
A course that introduces various concepts and applications in the field of conservation and landscape ecology. Degradation processes, principles of restoration ecology, and models of conservation biology are discussed. Part of this course concentrates on the use of remote sensing, GIS, and GPS as tools in landscape ecology.		
BIOL 390	Special Topics in Biology	1, 2, 3, or 4 cr.
<i>Prerequisites: graduate standing and consent of instructor. May be repeated for credit.</i>		
BIOL 391/392	Tutorial	2 or 3 cr.
<i>Prerequisite: graduate standing.</i>		
BIOL 393/394	Seminar	1 cr.
<i>Prerequisite: graduate standing.</i>		
BIOL 395A/395B	Comprehensive Exam	0 cr.
<i>Prerequisite: Consent of adviser.</i>		
BIOL 399	MS Thesis	9 cr.

Doctor of Philosophy in Cell and Molecular Biology

Mission Statement

The doctoral program in Cell and Molecular Biology aims to provide the best training to students for their careers as research scientists in Cell and Molecular Biology. It provides students with the opportunity to develop their capacity for scholarly and independent work, critical analytical thinking, and the ability to communicate knowledge and ideas. It is intended to produce scientists who will make significant original contributions to the biological sciences. The program exposes students to theoretical foundations and practical training in current laboratory techniques. It serves the AUB mission by providing qualified researchers for Lebanon and the region, and prepares students for careers in research, teaching, and public service.

Learning Outcomes

Students are expected to develop:

- theoretical and practical expertise in a current research area of Cell and Molecular Biology;
- skills to identify and pursue basic research questions, by initiating and successfully conducting a sustainable program of original research;
- an ability to generate and analyze data critically, and apply that ability in their own research; and
- skills necessary to communicate findings in both oral and written formats through presentations at scientific meetings and publications in peer-reviewed journals.

Admission Requirements

The PhD program is a 5 year program, with a maximum of 7 years permitted for its completion. Admission to the program will be on a competitive basis. To be eligible for admission, applicants should have a good academic record, demonstrate genuine interest in Cell and Molecular Biology research, and must:

- hold a Bachelor's (BS) or Master's (MS) degree in Biological Sciences or related fields from a recognized institution;
- present three letters of recommendation from previous tutors or employers;
- submit scores from the general Graduate Record Examination (GRE), and the subject GRE either in Biology or Biochemistry, Cell and Molecular Biology. This exam is required by both BS and MS holders. A score on a previously taken GRE will remain valid for 3 years;
- submit a score on the Test of English as a Foreign Language (TOEFL) or English Entrance Examination (EEE) that meets the university requirements (250 for computer-based TOEFL, 600 for paper based TOEFL and 550 for EEE);
- present a statement of purpose;
- be interviewed by a select group of department faculty members. The faculty members may require the student to give a seminar presentation;
- be recommended for admission by the Biology Department.

Program Completion Requirements

A minimum of 36 credit hours beyond the Bachelor's program, or 15 credit hours beyond the Master's program are required. To fulfill course requirements, six required core courses (18 credits), in addition to elective courses are offered. Beyond the Bachelor's program, each PhD candidate would register for 4 semesters of course work for an average of 9 credit hours per semester. A maximum of 21 credit hours may be transferred from the Master's work if considered within the scope of the program.

Upon admission into the program, each student will be assigned an academic adviser who will design the set of elective courses to meet the student's research interests and career goals, and will advise if undergraduate courses are needed to rectify deficiencies. Each student's course of study will be designed individually, in light of the student's interests and career goals. All the duties of the academic adviser will be transferred to the student's thesis adviser, who must be selected not later than the end of the first year for students entering with MS, and by the second year for students entering with BS.

The program incorporates the existing Master's program and consists of 6 core courses that address basic principles of cell and protein function, gene expression and two courses that introduce the students to basic research techniques and bio-statistics. In addition, elective courses are chosen towards the completion of the course requirements.

Core Courses

The following courses are considered as core courses and are required by all students:

BIOL 310	Quantitative Methods in Biology	3 cr.
BIOL 315	Research Methods in Biology	3 cr.
BIOL 322	Advanced Biochemistry	3 cr.
BIOL 330	Molecular Genetics	3 cr.
BIOL 332	Advanced Cell Biology	3 cr.
BIOL 334	Cellular Biophysics	3 cr.

These courses may be replaced by elective courses if the latter are already taken as part of the Master's program.

Elective Courses

Elective courses are taken to meet the credit requirements and to emphasize the student's research work and field of specialty. These courses may be chosen from the Biology Department MS course offerings, or from the courses below, or from course offerings of other departments that fall within the student's field of interest and the scope of the program.

BIOL 324	Proteins Structure and Function	3 cr.
BIOL 331	Nucleic Acid Structure and Function	3 cr.
BIOL 333	Signal Transduction	3 cr.
BIOL 335	Molecular Biology of Cancer	3 cr.

BIOL 337	Molecular Biology of Cell Death	3 cr.
BIOL 338	Cancer and Natural Products	3 cr.
BIOL 339	Membranes and Membrane Transport	3 cr.

Laboratory Rotations

During the first year of study, students must take a minimum of 5 credits as tutorial courses in different faculty research laboratories within the Biology Department or the University. The department considers exposure to different research environments an essential part of training. This requirement may be reduced to one tutorial of 3 credits for students entering with a Master's degree. At least one tutorial must be taken with faculty other than the adviser. A student cannot take more than 7 credits as tutorials including those required.

Seminars

Students are required to attend and participate in seminars and journal clubs on a regular basis. Academic credit (one credit) will be received only in the first semester. Subsequent semesters will not be credited.

PhD Qualification Exams Part I and Part II

For MS Students, upon completion of a minimum of 15 credits of coursework, the student will sit for a comprehensive exam (PhD Qualification Exam Part I) to determine whether the student has acquired the necessary background to successfully complete the doctoral program. The student is also expected to orally defend (PhD Qualification Exam Part II) the doctoral research proposal and demonstrate the intellectual capacity to pursue and complete an appropriate doctoral research project.

Candidacy and Residency

Refer to General University Academic Information, Requirements for the Degree of Doctor of Philosophy, section that has clearly defined candidacy and residency requirements.

PhD Thesis Committee

At least eight months prior to the thesis proposal defense, a doctoral thesis committee that provides general guidance and advises the student on the research project will be formed. The committee must be chaired by a full professor other than the thesis advisor. The committee will consist of at least 5 members, two of whom should be from outside the Biology Department, and at least one of the two must be from outside AUB. If the thesis supervisor is an assistant professor then the thesis committee must include a co-supervisor of associate or full professor rank. The doctoral thesis committee will evaluate the thesis proposal and the thesis research and thesis.

BIOL 490	Preparation for Qualification Exam Part 1 Exam	0.0; 0cr.
BIOL 491/492	Tutorial	2 or 3cr.
BIOL 495	Preparation for Thesis Proposal	0.0; 0cr.
Research is conducted individually by the student leading to a thesis proposal.		
BIOL 499	PhD Thesis
