The Department of Epidemiology and Population Health offers courses in epidemiology, biostatistics, and population health to graduate students in the Faculty of Health Sciences and the Faculty of Medicine. The course offerings to students in the Master of Public Health (MPH) program, the Master of Science (MS) in Epidemiology program, and the Master of Science (MS) in Population Health program are given as core, required, and elective courses. In addition, members of the department offer courses in statistics and epidemiology to students in the Medical Degree program, and coordinate and participate in teaching courses in preventive medicine and public health programs in the Faculty of Medicine.

**EPHD 225  Medical Statistics  1.2; 2 cr.**
An introductory course for Medicine I students to the study of biostatistics applied to medicine. Topics include introduction to biostatistics in medicine; methods of describing data; statistical inference for means and proportions, both parametric and non-parametric; and multiple linear regression and logistic regression.

**EPHD 226  Epidemiology  2.2; 3 cr.**
A course required of Medicine II students which consists of lectures and complementary practical sessions that provide students with basic epidemiological tools relevant to both clinical and public health practice. This course also covers issues in design, conduct, and analysis of epidemiological studies, in addition to critical appraisals of scientific literature.

**EPHD 300  Principles of Epidemiology  2.2; 3 cr.**
A course in principles, concepts and application of epidemiology in the public health field. The course consists of lectures, assigned readings and complementary practical sessions that provide students with basic epidemiological knowledge and tools relevant to public health practice. Students are given the opportunity to acquire an understanding of the vocabulary of epidemiology and methods of epidemiological research, investigation and control. Topics covered include rubrics of epidemiology, morbidity and mortality measures, sources of epidemiological data, outbreak investigation, epidemiological study designs, causal inference and causation in epidemiology. This course also covers an overview of the major biological agents associated with infectious and communicable diseases with a focus on disease ecology, etiology, transmission and contagion modes.

* Part-time
EPHD 310  Basic Biostatistics  2.2; 3 cr.
An introductory Biostatistics course that covers basic concepts in statistical methods. The
course demonstrates methods of exploring, organizing, and presenting data. The course
presents the foundation of statistical inference from estimation, to confidence interval and
testing of hypothesis. Applications include comparing population means or proportions via data
obtained from paired or independent samples, one way ANOVA. Also, it introduces simple linear
regression, correlations, logistic regression and nonparametric methods for data analysis.

EPHD 312  Analysis of Continuous Data  2.2; 3 cr.
A course that deals with concepts and methods for the analysis of continuous outcomes. Main
focus is on multiple linear regression. Analytical means to control for confounding and effect
modification while maximizing precision is explored. The methods of regression diagnostics are
explained. Basic theory is considered; however, the emphasis is on application. Applications
of the statistical techniques are carried out using the statistical package STATA. Prerequisite:
EPHD 310, or consent of instructor.

EPHD 313  Analysis of Categorical Data  2.2; 3 cr.
A course that covers univariate and multivariate statistical techniques for categorical data.
Topics include distributions, measures of association and inference for categorical data, log-
linear models for multi-contingency tables, and logistic regression for binary, polytomous, and
ordinal responses. In addition, the concept of maximum likelihood estimation is introduced.
Applications of the statistical techniques are carried out using the statistical package STATA.
Prerequisite: EPHD 310, or consent of instructor.

EPHD 320  Design and Analysis of Epidemiological Studies  2.2; 3 cr.
This course is offered to graduate students who have already been exposed to basic
epidemiological and biostatistical concepts. It covers in detail methodological issues concerning
the design and analysis of epidemiological studies with particular emphasis on case control
and cohort studies, and the interpretation of results. Prerequisites: EPHD 300 and EPHD 310, or
consent of instructor.

EPHD 321  Design and Analysis of Clinical Trials  1.2; 2 cr.
A course that focuses on issues in the design and organization of randomized controlled clinical
trials: ethical and legal issues, patient selection, recruitment, masking and randomization,
endpoint definition, protocol development, and statistical analysis. Designs such as cross-
over designs, factorial-designs, and meta-analysis are discussed. Prerequisites: EPHD 300 and
EPHD 310, or consent of instructor.

EPHD 322  Special Topics in Epidemiology  2.0; 2 cr.
A course that covers selected topics of special interest to trainees in epidemiology. Examples
include assessment of disease burden using epidemiological studies, occupational epidemiology,
epidemiology of aging, epidemiology of maternal-child problems, or nutritional epidemiology.

EPHD 323  Epidemiology of Communicable and Non-communicable Diseases  3.0; 3 cr.
The course examines a number of selected communicable and non-communicable diseases,
given their burden on morbidity and mortality, at the local, regional and international level.
The course provides an overview of their public health importance, epidemiology, associated
risk and protective factors, and strategies for prevention and control. The main methodological
issues pertaining to the measurement, control and/or prevention of communicable and non-
communicable diseases are also discussed. Prerequisite: EPHD 300 or any undergraduate or
graduate basic epidemiology course.
EPHD 324  **Special Topics in Biostatistics**  1–3 cr.
A course that covers selected topics in biostatistics of special interest to researchers and trainees in epidemiology and population health. *Prerequisite: EPHD 310 or consent of instructor.*

EPHD 325  **Medical Statistics**  1.2; 2 cr.
*Similar to EPHD 225. Offered to graduate students.*

EPHD 326  **Epidemiology**  2.2; 3 cr.
*Similar to EPHD 226. Offered to graduate students.*

EPHD 330  **Demographic Methods for Public Health Decision-Making**  2.0; 2 cr.
An introductory course on selected demographic methods and measures of population health. The emphasis is on conceptual issues, measurement and hands-on experience with basic techniques, as well as inequalities in health over the life course. Topics covered include sources and quality of population data; rates and ratios; standardization and decomposition; mortality measures and the life-table; perceived versus actual morbidity; the burden of disease; period and cohort measures of fertility; migration rates; and marriage indices.

EPHD 331  **Population Change and Health**  3.0; 3 cr.
Population change is central to public health. This course provides a broad introduction to the field of population. It identifies core topics in population, discusses their relation to development and health, and emphasizes measurement issues. Topics covered include population size and growth as they relate to resources and to population health; components of population change including fertility and mortality, their links to development and consequences for health; population composition by age and gender and by socioeconomic status, and related inequalities; and population movements including forced, internal and international migration as factors of population change and health. Special focus is given to the Arab World and the Middle East Region.

EPHD 332  **Population and Health Policy**  3.0; 3 cr.
A course designed to explore the links between population, health, and development issues, with a focus on population policies and programs in the Middle East and North Africa. Topics include demographic trends and their implications for health policies; family planning programs and policies; the reproductive health paradigm; HIV/AIDS; gender and population policy; special health needs posed by the youth “bulge” and population aging; political dimensions of population policies; and debates between the policy objectives of reducing population growth at the macro level and promoting individual well-being.

EPHD 333  **Special Topics in Population Health**  1- 3 cr.
An examination of specific topics in population health such as aging, burden of disease, reproductive health, fertility of adolescents, social determinants of population health, and the demography of refugee populations.

EPHD 334  **Reproductive Health**  3.0; 3 cr.
A course that examines selected issues in reproductive health with a focus on developing countries. Topics covered include pregnancy and childbirth, unintended pregnancy, maternal mortality, infertility, gynecological morbidity including sexually transmitted infections, sexuality, birth spacing and family planning, and reproductive rights. Particular emphasis is placed on conceptual issues and recent debates about reproductive health within the context of the international agenda on reproductive rights established at the 1994 Cairo Conference on Population and Development.

<tr>
<td></td>
<td>The course involves a research project that the student carries out within his/her area of concentration or interest, as an individual or as part of a group. This research may focus on one or more of the qualitative and quantitative methodologies introduced in Research Design, Principles of Epidemiology and Basic Biostatistics. This course gives the student the chance to apply background knowledge and master research skills in an area of interest. Prerequisites: PBHL 310, EPHD 300, EPHD 310 and completion of all, or all but one, of the core and concentration courses.</td>

<tr>
<td>EPHD 365</td>
<td>Practicum in Epidemiology and Biostatistics</td>
<td>0.30 cr.</td>
</tr>
<tr>
<td></td>
<td>The practicum offers students the opportunity to practice their obtained knowledge and gain research experience in epidemiology and biostatistics mainly through the design of epidemiological studies or data collection and analyses of various types of data. Students are advised internally by a faculty member and externally by an outside preceptor in the practicum site. Practicum sites may include the Ministry of Public Health, Ministry of Social Affairs, non-governmental agencies, UN agencies (UNICEF, ESCWA, UNFPA), and health services organizations. Prerequisites: PBHL 355 and completion of all, or all but one, of the core and/or concentration courses.</td>
