Evidence-based Healthcare Management Unit
Cross-disciplinary Unit
at the American University of Beirut
EHMU

Mission
The unit’s mission is to generate knowledge and evidence that is necessary for the effective and efficient application of management principles within the healthcare industry.

Vision
The unit’s vision is to become the facilitating hub in the region for knowledge generation and service improvement using evidence-based healthcare management.

Services
Research Partnership
EHMU is a cross-disciplinary research unit, based in the Faculty of Medicine at AUB that fosters collaboration between departments and faculties at AUB and other universities and hospitals.

EHMU aims at encouraging cross-disciplinary research by amalgamating the diverse areas of expertise and applying them into the healthcare sector.

Faculty members, from all faculties at AUB and other institutions can contact us should they wish to conduct non-clinical research.

Management Support
We provide evidence-based solutions to management operations at AUBMC and the wider healthcare sector.

The aim is to promote, through research and training, decision-making in management that is based on the best current evidence while taking into account the needs and values of the parties involved.

Departments at AUBMC can contact us should they need assistance in making better and more informed managerial decisions.

Mentorship
We mentor post-graduate students (AUB or non-AUB) and interns interested in projects related to healthcare management.

Graduate students, interns and volunteers interested in developing their skills in health management research can contact us.

We also provide candidates with training and development opportunities. EHMU also offers volunteers experience in various aspects of evidence-based health care management research.

Development Services
We provide development services for the healthcare community at large, in which EHMU assists hospitals to focus on their deficiencies and guide them through the process of quality improvement.

Hospitals in Lebanon and the Middle Eastern region can contact us should they need assistance in making better and more informed managerial decisions.
