

**Radiologic
Technology
Training Program**

Radiologic Technology Training Program

Program Coordinator: Mansour, Zepure

General Information

The Radiologic Technology program offers two years of theoretical and clinical training in all diagnostic imaging modalities. Theoretical training is provided in the program's facilities located in the sub-basement of the Medical Center, and clinical training is provided in the Department of Diagnostic Radiology of the Faculty of Medicine.

The program also offers post-certificate courses in specialized imaging modalities.

Admission

The minimum requirement for admission to the first year is the Lebanese Baccalaureate, or its equivalent. Applicants must take the SAT I and the University's English Entrance Examination or TOEFL, as specified in the admissions section of this catalogue.

Curriculum

First Year

First Semester			Credits
XR	101	Orientation	3
XR	103	Physics	7
XR	105	Anatomy and Physiology	6
XR	107	Image Production and Processing	6
XR	109	Radiographic Technique	7
XR	111	Clinical	2

Second Semester			Credits
XR	104	Physics	7
XR	106	Anatomy and Physiology	6
XR	108	Image Production and Processing	6
XR	110	Radiographic Technique	7
XR	102	Clinical	2
XR	112	Fundamentals of Nursing and Patient Care	3
Summer Session			Credits
XR	114	Clinical	4
XR	207	Sectional Anatomy	2
			Total 68

Second Year

First Semester			Credits
XR	201	Special Procedures	6
XR	203	Radiologic Equipment	8
XR	205	Introduction to Principles of Diseases	5
XR	208	Sectional Anatomy	2
XR	209	Clinical	4

Second Semester			Credits
XR	202	Special Procedures	6
XR	204	Radiologic Equipment	8
XR	206	Introduction to Principles of Diseases	5
XR	212	Clinical	4

Summer Session			Credits
XR	214	Clinical	4
XR	210	Projects	2
			Total 54

Post-Certificate Courses (Optional)			Credits
XR	220	Mammography	10
XR	222	Ultrasonography	12
XR	224	Computed Tomography	12
XR	226	Magnetic Resonance I	14
XR	228	Magnetic Resonance II	14

Course Descriptions

XR 101	Orientation, Theory	3 cr.
An overview of the field of radiologic technology and its role in health care delivery. Students are oriented to academic and administrative structure, and the profession as a whole. Basic principles of radiation protection are introduced. The ethical and legal responsibilities of the profession are discussed.		
XR 102	Clinical, Practicum	2 cr.
Clinical training in the Department of Diagnostic Radiology.		
XR 103	Physics, Theory	7 cr.
A course that focuses on units of measurement, the structure of the atom, electrostatics, electricity, magnetism, AC generators, DC motors, transformers, and rectification of AC.		
XR 104	Physics, Theory	7 cr.
An introduction to modern physics, production of x-rays, x-ray interactions, radioactivity, production of radionuclides, and health physics.		
XR 105	Anatomy and Physiology, Theory	6 cr.
A course that provides students with a knowledge of the structure and function of the human body. Cells, tissues, skeletal and muscular system, nervous system, sense organs, and the endocrine system are discussed.		
XR 106	Anatomy and Physiology, Theory	6 cr.
A course that describes the anatomy and physiology of the cardiovascular system, the blood, lymphatic and immune systems, respiratory, urinary and digestive systems, male and female reproductive systems, growth and development, and genetics and heredity.		
XR 107	Image Production and Processing, Theory	6 cr.
An introduction to computer technology. Detailed study of various image-detecting systems; description of different types of films, screens, darkroom design, computed and digital radiography. A focus on computed radiography image quality.		
XR 108	Image Production and Processing, Theory	6 cr.
A course that focuses on the chemistry of film processors, automatic film processing, daylight systems, overall radiographic image quality, sensitometric assessment of films, and digital image processing.		
XR 109	Radiographic Technique, Theory	7 cr.
An introduction to radiographic procedures, radiographic nomenclature, positioning aids, and accessory equipment. This course also provides a description of radiographic procedures pertaining to upper and lower extremity, shoulder girdle, and pelvis.		
XR 110	Radiographic Technique, Theory	7 cr.
A description of the radiographic procedures pertaining to the thorax, the vertebral column, the cranium, facial bones, and forensic radiography.		
XR 111	Clinical, Practicum	2 cr.
Clinical training in the Department of Diagnostic Radiology.		

XR 112	Fundamentals of Nursing and Patient Care, Theory	3 cr.
A course that provides knowledge and skills in selected techniques commonly performed by technologists. This course assists students in developing a greater understanding of patients as individuals, and the role of the technologist as a member of the health care team.		
XR 114	Clinical, Practicum	4 cr.
Clinical training in the Department of Diagnostic Radiology.		
XR 201	Special Procedures, Theory	6 cr.
An overview of contrast materials used in imaging. This course also provides a study of imaging procedures related to gastrointestinal, hepato-biliary, and genito-urinary.		
XR 202	Special Procedures, Theory	6 cr.
A study of imaging procedures related to the circulatory system, breast imaging techniques and interventional procedures related to different systems.		
XR 203	Radiologic Equipment, Theory	8 cr.
A detailed study of the x-ray tubes with methods of kV, mA, and exposure time control; control of scattered radiation, mammographic and tomographic equipment, image intensification, and television systems. A description and function of automatic film changers and pressure injectors.		
XR 204	Radiologic Equipment, Theory	8 cr.
This course covers the topics of equipment design and function in computed tomography, nuclear medicine, ultrasonography, and magnetic resonance imaging.		
XR 205	Introduction to Principles of Disease, Theory	5 cr.
An introduction to pathology that focuses on nature and causes of diseases, diseases of the gastrointestinal and hepato-biliary systems, and genito-urinary and endocrine systems.		
XR 206	Introduction to Principles of Disease, Theory	5 cr.
A study of diseases of the nervous system, skeletal system, respiratory, cardio-vascular, and hematopoietic diseases; and miscellaneous diseases related to nutrition and the immune system.		
XR 207	Sectional Anatomy, Theory	2 cr.
A study of the sectional anatomy of the head, neck, and thorax.		
XR 208	Sectional Anatomy, Theory	2 cr.
A study of the sectional anatomy of the abdomen, pelvis, and extremities.		
XR 209	Clinical, Practicum	4 cr.
Clinical training in the Department of Diagnostic Radiology.		
XR 210	Projects	2 cr.
An application of basic research methodology in the preparation of case studies, presentations, and journal clubs.		
XR 212	Clinical, Practicum	4 cr.
Clinical training in the Department of Diagnostic Radiology.		
XR 214	Clinical, Practicum	4 cr.
Clinical training in the Department of Diagnostic Radiology and various departments/divisions using imaging modalities.		

XR 220	Mammography, Practicum, and Projects	10 cr.
XR 222	Ultrasonography, Practicum, and Projects	12 cr.
XR 224	Computed Tomography, Practicum, and Projects	12 cr.
XR 226	Magnetic Resonance I, Practicum, and Projects	14 cr.
XR 228	Magnetic Resonance II, Practicum, and Projects	14 cr.
