Department of Environmental Health

Results of the survey administered during the workshop on “Physical School Environment Parameters: Guidelines, Levels, and Values”, which was a part of the activities of the **School Network for a Healthy Environment.**

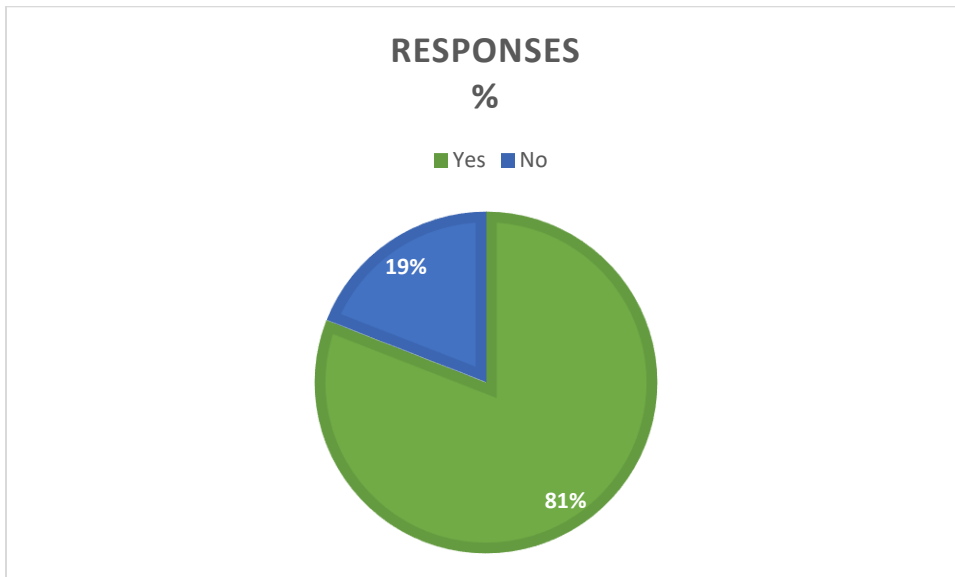

on March 28th, 2018

The main objective of this questionnaire was to measure the physical school environment key parameters at participating schools.

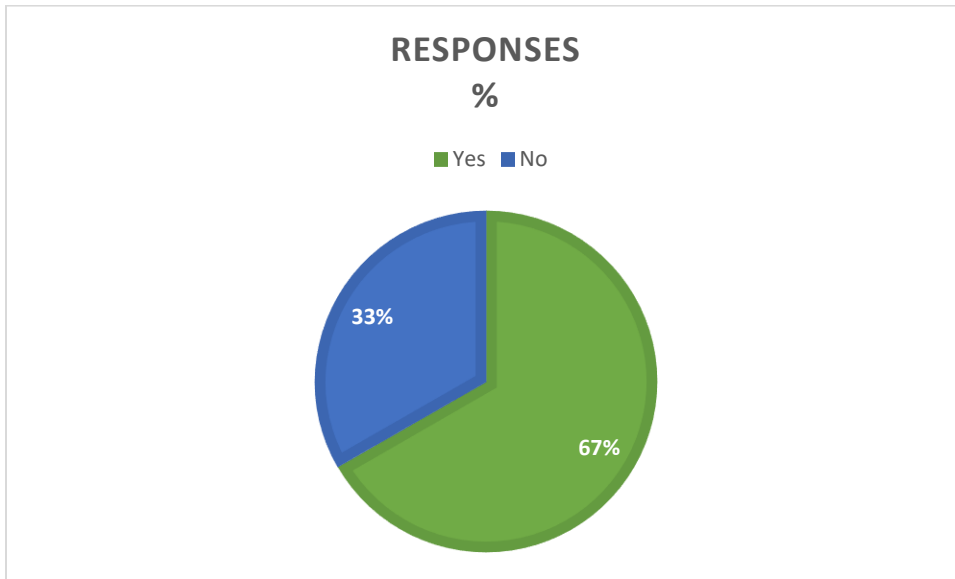

1-Does your school have an indoor air quality management program?

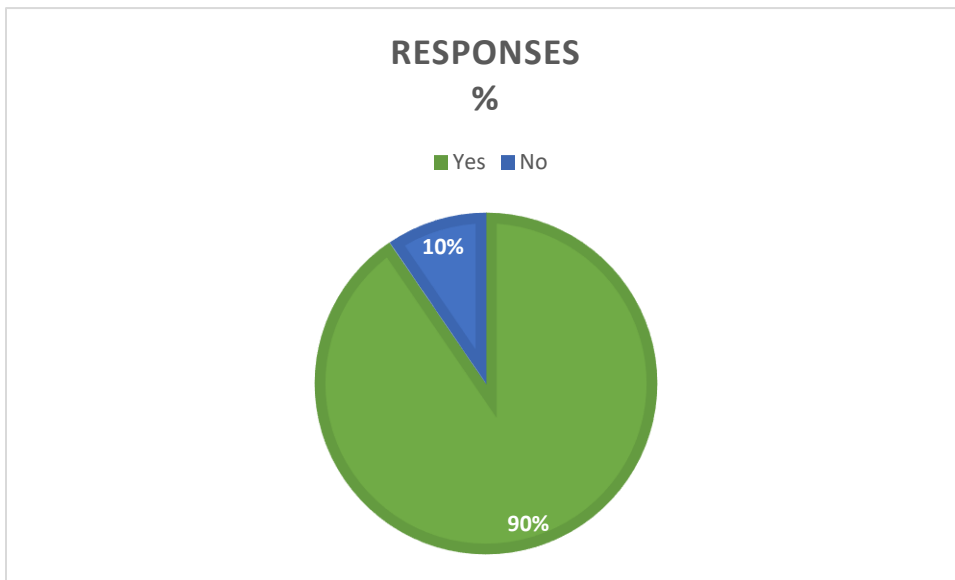

2-During the past year, was your school water quality tested for physical, chemical and microbiological contaminants?

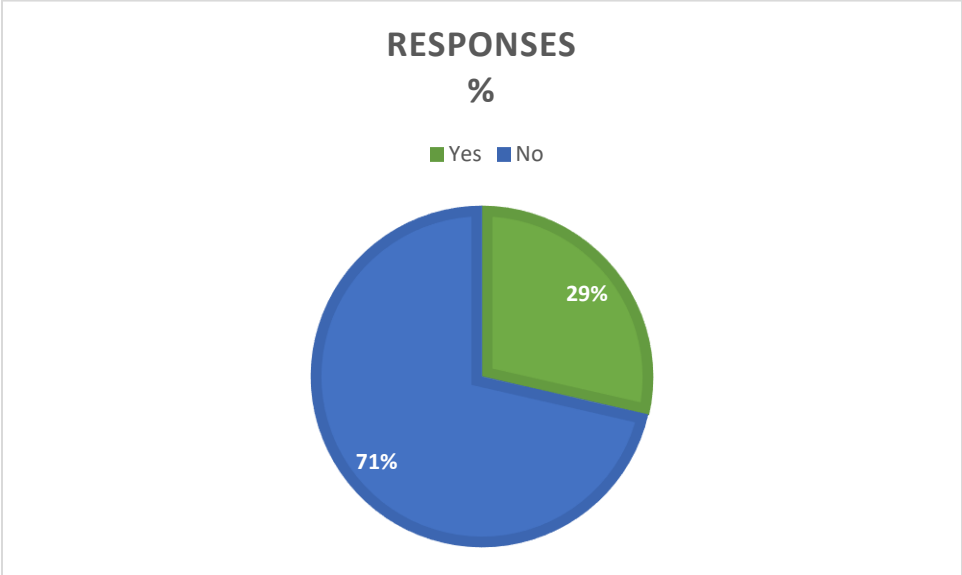

3-Does your school have a food safety management plan?

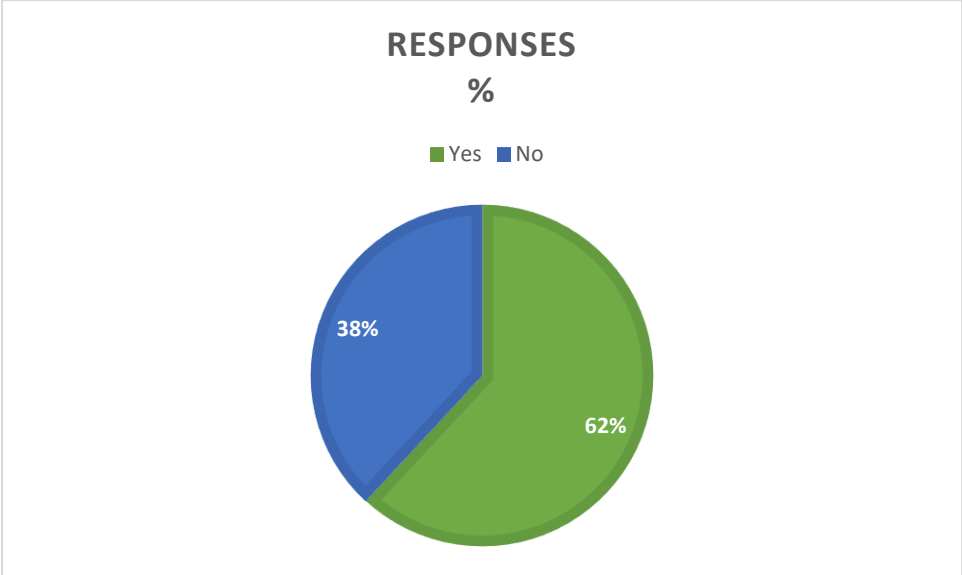

4-Does your school apply an integrated pest management approach?

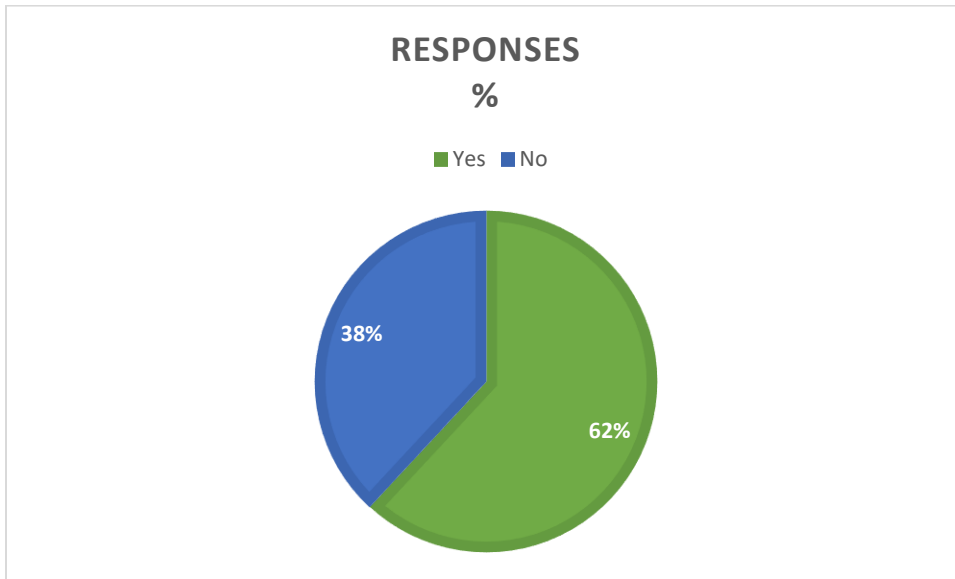

5-Does your school have a solid waste management plan?

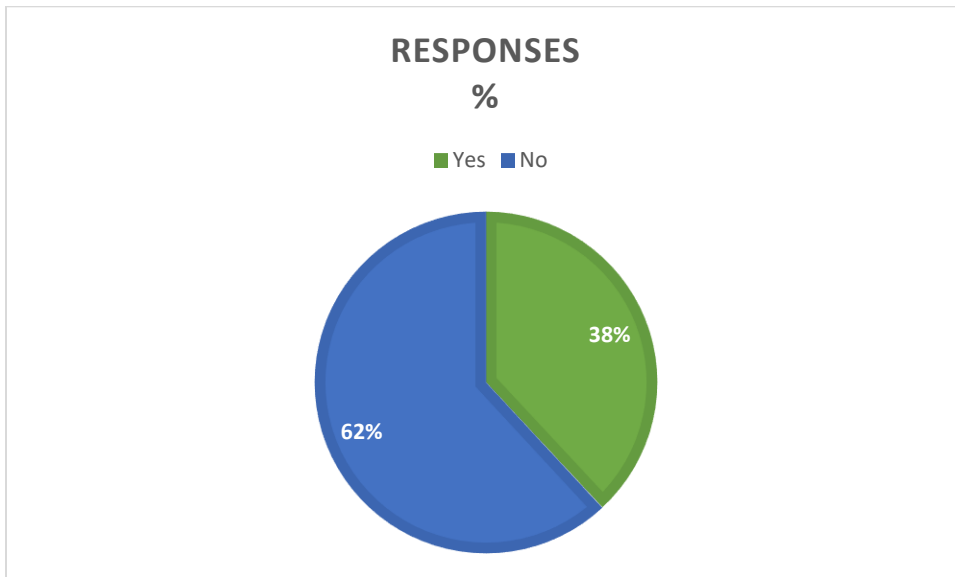

6- Does your school have an emergency plan?

7- Does your school have a green or Eco-club?

8-Does your school involve students, families or other community members in environmental projects?

9- which topic of the following you would like us to cover in our next workshop?
