

Dr. Margaret Shirinian is an Assistant Professor in the Department of Experimental pathology, Immunology and Microbiology, Faculty of Medicine, at the American University of Beirut (AUB). She has established the Drosophila core facility at the Faculty of medicine and has been actively involved in leading research using this invertebrate model in both development and cancer. Her research work is focused on understanding how the epigenome affects brain development and cancer. At AUB, Dr. Shirinian is involved in course coordination, teaching, advising and mentoring students with diverse educational backgrounds (Undergraduate, Graduate-MSc and PhD, and Med I) and she serves on several task forces and committees at the Faculty of Medicine and AUB.
