

Martine Elbejjani is an Assistant Professor and the director of the Research Education Unit at the Clinical Research Institute and Department of Internal Medicine at the American University of Beirut. She is a neuro-epidemiologist and her research focuses on studying the manifestation, interplay, and neuropathology of neurocognitive and mental health disorders in older age and on identifying their predictors and etiological pathways across the life course, with a focus on social and cardiovascular predictors and pathways.

She holds a BSc and MSc in psychiatric genetics and a PhD in neuro-epidemiology from McGill University; before joining AUB, she completed a postdoctoral fellowship at the neuro-epidemiology unit of the National Institute on Aging, National Institutes of Health.
