

5. EVALUATION OF HEALTHCARE INSTITUTIONS :

EMA specialized teams assist current healthcare institutions in improving services and the quality of care provided, reshaping hospital mission and vision as required, and ensuring better financial results. This will be achieved through revising all operating procedures and decisions, evaluating medical and non-medical staff performance, identifying strengths and weaknesses, and recommending solutions. EMA can also, through AUB specialized and well-experienced teams and its selected sub-consultants, carry out a detailed evaluation of the healthcare physical set-up, medical equipment, etc. of any healthcare institution.
