

Abstract:

Prof. Maddah will explain the IEM department approach for supervising graduate student's thesis research. He will also present some (hopefully) useful tips on how to (i) finish your thesis (if any) on-time, (ii) learn from it, and (iii) have an impact.

Prof. Al Qaisi will then illustrate with examples from his joint research with thesis students. Prof. Al Qaisi's research interests are in human factors engineering, occupational biomechanics, health care, occupational safety and health, usability engineering, and human-computer interaction
