Faculty of Medicine and Medical Center (FM/AUBMC)
Faculty of Medicine and Medical Center (FM/AUBMC)

Officers of the Faculty

Fadlo R. Khuri President of the University
Mohamed Harajli Interim Provost, ex-officio
Mohamed H. Sayegh Executive Vice President for Medicine and Global Strategy and the Raja N. Khuri Dean of the Faculty of Medicine
Ziyad Ghazzal Deputy VP/Dean and Associate Dean for Clinical Affairs
Kamal Badr Associate Dean for Medical Education
Ali Bazarbachi Associate Dean for Basic Research
Fadi Bitar Associate Dean for External Medical Affairs
Ghassan Hamadeh Associate Dean for Ambulatory Care, Information Systems, and CME
Samia Khoury Associate Dean for Translational and Clinical Research
Ghazi Zaatari Associate Dean for Faculty Affairs
Ayad Jaffa Assistant Dean for Graduate Studies and Interdisciplinary Programs
Ramzi Sabra Assistant Dean for Undergraduate Medical Education
Salah Zeineldine Assistant Dean for Graduate Medical Education
Huda Abu-Saad Huijer Director of Hariri School of Nursing
Zeina Kanafani Director of Medical Student Affairs
Moueen Salameh Registrar, ex-officio
Salim Kanaan Director of Admissions, ex-officio
Lokman Meho University Librarian, ex-officio

Faculty Administrative Support

Nadine Chatila Director of Medicine Business Unit
Abdul Latif Daouk System Administrator and Programmer
Noha Hachach Administrative Director of AUBMC Affiliations and Executive Administrator for Clinical Affairs
Caroline Ann Haddad Curriculum Implementation Officer
Mahmoud Harb Medical Education Unit Coordinator
Maha Wazzi Istanbuli HR Generalist- Faculty of Medicine
Rania Jaber Graduate Medical Education Officer
Hala Kaid Bey Research and Grants Education Manager
Luma Sidani Kronfol Director of Programs and Space Planning Unit
Yumna Maalouf Executive Administrator/Extramural Grants Officer
Nabil Mansour Executive Officer/HR Specialist
Reem Saad Executive Officer
Boushra Rahal Alameh Academic Affairs Coordinator
Historical Background

Since 1867, the founding date of the Faculty of Medicine, both the Faculty of Medicine and the Medical Center have continuously been providing services in the realms of medical education, training, and health care to their immediate constituencies in Lebanon and the Middle East region. To date the Faculty of Medicine has graduated 4,225 physicians, and there is a large postgraduate training program of over 280 residents in most of the departments. The Faculty of Medicine programs have been approved by and registered in the Education Department of the State of New York on a continual basis since 1867. In 1957 the faculty became an institutional member of the Association of American Medical Colleges. It enjoyed this status until 1988, when the new rules of the association precluded membership of institutions outside the confines of the North American continent.

The AUB Medical Center has been accredited by the Joint Commission International (JCI) as of October 2007. Previously, the Medical Center was accredited by the US-based Joint Commission on Accreditation of Healthcare Organizations (JCAHO) from 1965 until 1983, when the civil war in Lebanon prevented review teams from continuing with their periodic site visits. The JCI is the international arm of the JCAHO. The National Board Examinations were administered to the faculty's undergraduate students for credit between 1966 and 1982. The faculty was a regional center for the administration of the examinations of the Educational Commission for Foreign Medical Graduates between 1959 and 1993. In addition, the faculty takes pride in having had very close links with prestigious American medical schools and centers including Columbia University from 1945 to 1955, Harvard School of Medicine from 1955 to 1965, and a formal affiliation with the Johns Hopkins School of Medicine from 1965 to 1975, which was supported by the Commonwealth Fund.

The Faculty of Medicine and the Medical Center have revived and established a number of links and affiliations with the following:

- Columbia University College of Physicians and Surgeons for student elective exchange (since 2002)
- University of George Washington School of Medicine in Washington, DC (as of September 8, 2004)
- Medical University of South Carolina (MUSC) (as of April 1, 2003) for an MD–PhD program that admits up to three medical students annually from AUB/FM
- Johns Hopkins University School of Medicine (as of May 10, 2004) for collaboration in research, education, and the provision of medical services training
- University of Paris 7 Denis Diderot for cooperative cancer research (as of December 8, 2004)
- University of Poitiers (France) for cooperative neurosciences research (as of February 3, 2006)
- St. Jude Children’s Research Hospital (as of April 19, 2000)
- Laval University in Quebec, Canada
- M.D. Anderson Cancer Center (as of June 6, 2007)
- Palermo University (as of April 23, 2007) for cooperation in research and higher education
- University of Montpellier (France) (as of August 3, 2007)

The Faculty of Medicine and the Medical Center (FM/AUBMC) are currently accredited by the following American-based accreditation bodies:

- The Middle States Commission on Higher Education
- The Joint Commission International (JCI) for hospital accreditation
• Accreditation of AUBMC by the Lebanese Ministry of Public Health
• Accreditation of the School of Nursing by the Commission on Collegiate Nursing Education (CCNE)
• Accreditation of the Nursing Services at AUBMC by the American Nurses Credentialing Center (ANCC)
• The College of American Pathologists (CAP)
In addition, the Faculty of Medicine with its Medical Center is a member of the following organizations:
• Alpha Omega Alpha (AOA) - Honor Medical Society (The Faculty of Medicine is the only member of the AOA outside North America since 1958)
• The American Medical College Application Service
• The American College of Physicians/American Society of Internal Medicine
• The Association of Program Directors in Internal Medicine

The MD Program

Mission
The mission of the Faculty of Medicine is to provide optimum, advanced, state-of-the-art, comprehensive, timely, and cost-effective medical education for each student. The faculty aims to reach this objective by implementing innovative teaching techniques, and by recruiting and retaining outstanding faculty and students. The faculty also strives for improved student performance and career opportunities, as well as improved basic and clinical research, more effective patient management, and new and innovative medical approaches. The faculty focuses on enhancing the regional and global reputation of the AUB Medical Center (AUBMC) by encouraging the development of additional centers of excellence, and developing more effective uses of physical resources and funds.

Vision
The vision of the Faculty of Medicine is to continuously upgrade the quality of education provided to its medical students and postgraduate physicians in the various medical and surgical subspecialties. This vision is implemented by the strong commitment of the faculty to educate young men and women to become excellent physicians with humane and high ethical standards, as well as technical expertise. The faculty also aims at providing a better environment for personal growth and recognition for all its students by inspiring them to become leaders in their fields. The Faculty of Medicine will always endeavor to provide opportunities for its students to develop individual initiative, creative ability, and professional leadership through participation in extracurricular seminars, discussion groups, research projects, and student organizations.

Admission
The Faculty of Medicine was established to give properly qualified candidates, particularly from Lebanon and the Near East, the opportunity for sound education in both the art and science of medicine. All applicants must hold a bachelor’s degree and must have completed the premedical requirements as well as the Medical College Admission Test (MCAT). Applicants in their senior year expecting to graduate with a bachelor’s degree in June are eligible to apply provided they have completed the premedical requirements and have taken the MCAT by the
end of the first semester of their senior year. For applicants holding (or expecting) a bachelors degree, consideration for acceptance is limited to students with a minimum cumulative general average of 75 percent in each of the following: 1) all courses, 2) the required premedical core courses, and 3) the major courses. For applicants from North American colleges, a minimum GPA of 3.2 is required. Applications from individuals holding (or expecting by June of the same year) a Master or a doctoral degree are encouraged. These applicants will be considered based upon their academic performance and their research productivity; in these cases, some of the premedical requirements may be waived depending on the field of study.

Interviews are granted to a selected group of applicants based on their MCAT scores and their academic achievement. Granting an interview does not necessarily imply that the applicant will be accepted. Students are accepted to medical school on the basis of their academic qualifications, their MCAT score, and the results of their interviews. In addition, due consideration is given to the applicants' letters of recommendation from their teachers and mentors, their curriculum vitae, as well as their personal statements. Among the traits that the successful applicant will demonstrate are humanistic and ethical attitudes, good communication and interpersonal skills, emotional maturity, and personal integrity. Previous experience in research, community service and volunteer work are considered positive attributes.

The Faculty of Medicine at AUB does not discriminate on the basis of age, gender, nationality, ethnic origin, or religion.

The minimal premedical requirements are summarized below:

A bachelor's degree in any field of study. Historically, the vast majority of applicants to the Faculty of Medicine have been holders of bachelor degrees in biology or chemistry. In an effort to diversify the pool of applicants, graduates from other majors are strongly encouraged to apply as long as they complete the premedical core courses required for admission to the Faculty of Medicine. Students can take some of the premedical courses as electives in their respective majors.

**Premedical core course requirements**

The minimal premedical requirements include biology with laboratory (7 credits), chemistry with laboratory (15 credits including 8 credits of organic chemistry), physics and basic electronics with laboratory (8 credits), English (6 credits at AUB or exemption), social sciences and/or humanities (6 credits). To facilitate applications by non-science majors and from diverse fields of study, some courses taken in the Lebanese Baccalaureate Program may count towards fulfillment of the premedical core course requirements as detailed in Table 1. Table 2 presents the recommended courses depending on the major of study at AUB.
Table 1: Premedical core course requirements and credit equivalents according to Lebanese Baccalaureate Program Subject

¹The new MCAT to be implemented in 2015 places significant emphasis on psychological and sociological concepts and on critical analysis and reasoning. Students planning to apply to medical school are advised to take PSYC 201 and SOAN 201, any two CS courses and PHIL 210.

1 Biology 200 is a very general course that does not prepare students well for the MCAT. Biology 201 and 202 provide better preparation, and students are advised to take both courses.
**MCAT.** A competitive score in the MCAT, which may be taken twice only, is required. If taken twice, the higher score is considered. The MCAT score must be available at the time the application is submitted. Since 2015, a new MCAT has been implemented which contains, in addition to the biological and physical sciences, a new section on the social and behavioral sciences. Students are encouraged to review the content of the new MCAT and plan their studies accordingly, e.g., by taking additional courses in psychology, sociology and anthropology, and in biology, chemistry and physics, after consultation with their advisors.

Applicants expecting to receive a bachelor’s degree after the deadline for application should be aware of the following:

- Applicants must be in their senior year.
- The cumulative average of 70 credits or more (at the time of application) should be equal to or higher than 75 percent for students from AUB, or its equivalent for those from other universities. **All required core courses must have been completed by the end of the fall semester of the senior year** with an average of at least 75 percent or its equivalent. The cumulative average in the major courses completed by the end of the fall semester of the senior year must also be equal to or greater than 75 percent.
- Admission to medical school is contingent upon completion of graduation requirements and obtaining the bachelor’s degree, which should be achieved by the end of the spring semester of the students’ senior year.

Applicants expecting to receive a master’s or doctoral degree after the deadline for application should be aware of the following:

- A minimum cumulative grade average of 80 percent or its equivalent is required.
- Admission to medical school is contingent upon completion of graduation requirements and obtaining the master’s or doctoral degree, which should be achieved by the end of the spring semester.

Conditional acceptance to the faculty is issued by the middle of April and is finalized upon completion of the requirements for the bachelor’s, master’s or doctoral degree.

**Graduation Requirements**

To be eligible for the degree of Doctor of Medicine, a student must satisfactorily complete the curriculum of the Faculty of Medicine and must be recommended by the Academic Committee. The degree may be granted with distinction to students who demonstrate excellence throughout the 4 years of medical school.

The Faculty of Medicine offers post-graduate training positions in the various academic departments at AUBMC to AUB and non-AUB medical graduates. However, these positions are limited and are granted on a highly competitive basis.

**Dean’s Honor List**

To be placed on the dean’s honor list, a student must be full-time and must not be repeating the year. The dean’s honor list is limited to the upper 15 percent of the class in years 3 and 4.
Academic Rules and Regulations

Also see General University Academic Information on page 47.

Attendance

Regular attendance is required at lectures, laboratories, clerkships, examinations, and other assigned duties. Credit is not given for work not performed. Students absent on account of illness or other valid reasons are requested to confer with the chairmen of the departments concerned. The committees concerned will review prolonged or repeated absences and decide on the appropriate course of action.

Language Requirement

The language of instruction is English. However, students must have speaking knowledge of Arabic before entering the third year. This requirement may be waived by special vote of the Academic Committee.

Promotions and Deficiencies

In the first and second years, the performance of students is evaluated as either pass or fail based on absolute standards of grading. In later years, a student's performance is evaluated as Excellent (E), Good (G), Pass (P), or Fail (F), based on normative grading. In the latter case, the distribution of grades in a class is as follows: the top 10-15 percent E, the following 35-40 percent G, and the remaining 50 percent P. A student whose score falls distinctly below the class distribution will receive a grade of Fail. The evaluation of the student in each subject is based on total performance and not solely on the results of examinations.

The student's performance is evaluated by appropriate class teaching committees, which make recommendations to the Academic Committee. The action of the Academic Committee is final. The class teaching committees and the Academic Committee give due consideration to a general evaluation of fitness for a career in medicine. Only those students who, in the opinion of the committees, give promise of being a credit to themselves, the faculty, and the medical profession are advanced.

To be promoted, a student must attain a grade of pass or better in all courses or clerkships, and must be recommended by the committees concerned. However, a student with a grade of pass in all courses or clerkships may, at the discretion of the committees, be promoted on probation, be asked to do remedial work and pass the re-examinations in designated courses or clerkships, or repeat the year.

A student in the first or second year who fails 25 percent or more credits in that year may be asked to repeat the year or withdraw from the faculty. A student who fails less than 25 percent of credits may be asked to do remedial work and pass the re-examination, repeat the year, or leave the faculty. At the discretion of the committees concerned, and in exceptional cases, a student repeating the year may be asked to repeat all or some of the courses.

A student in the third or fourth year who fails 50 percent or more of clerkship hours may be asked to repeat the year or withdraw from the faculty. A student who fails less than 50 percent of clerkship hours may be asked to do remedial work and pass the re-examinations, repeat a clerkship, repeat the year, or leave the faculty. At the discretion of the committees concerned, a student repeating the year may be asked to repeat all or some of the clerkships.
A student who is repeating a year and fails any course or does not attain a grade of “Good” or better, or its equivalent in years 1 and 2, in 50 percent of credits may be asked to withdraw from the faculty.

A student who is placed on probation cannot graduate unless probation has been removed.

Courses

Numbers Preceding Course Titles
Courses required for the Doctor of Medicine degree are numbered 200 to 299 as follows:

- 200 to 239 indicate courses given in first and second year medicine
- 240 to 259 indicate courses given in third year medicine
- 260 to 279 indicate courses given in fourth year medicine
- 280 to 299 are reserved for clinical clerkships during the year of internship

For the first and second years, odd numbers refer to first semester courses and even numbers to second semester courses. Year courses are indicated by a hyphen between the two numbers.

Graduate courses leading to the Master and Doctor of Philosophy degrees are numbered 300 to 399.

Regular medical courses approved for graduate work (MS and PhD program) have two numbers.

Numbers preceded by the letters ID (Interdepartmental) or FM (Faculty of Medicine) indicate integrated courses taught by two or more departments together.

Numbers Following Course Titles
The first number following the title of a course indicates the total number of lectures, conferences, and discussion hours given, except where otherwise stated.

The second number indicates the total laboratory or clinical practice hours, except where otherwise stated.

The third number indicates the number of semester credit hours. Credit hours are used in conjunction with first and second year courses only.

Course Descriptions
All the following courses, except those listed as electives, are required of students working toward the degree of Doctor of Medicine. The electives designated may be chosen with the consent of the instructor. Detailed course descriptions are available under individual departments.

Interdepartmental Courses – Medical Program

First and Second Years

**IDTH 201 Cellular and Molecular Basis of Medicine**  
90.40; 7 cr.  
An interdisciplinary course that presents the cellular and molecular concepts and principles that underlie the normal structure and function of the human body. It covers cellular structure and function, including mechanisms and regulation of gene expression, protein synthesis, structure and function, signaling mechanisms, membrane transport, energy metabolism, contractility, and excitability, and the basic principles of drug action. Clinical examples and correlations are presented to illustrate the relevance of cellular and molecular function to medicine.

**IDTH 202 Clinical Anatomy**  
38.110; 6 cr.  
A regional dissection of the entire human body supplemented by embryology, clinical lectures, and discussions. The student is also introduced to radiographic anatomy based on various imaging modalities, in addition to computer-assisted instruction.

**IDTH 203 The Immune System in Health and Disease**  
37.28; 3 cr.  
A course that deals with the immune system's responses in states of normalcy and disease, from the molecular to the clinical level, and covers the pathophysiology, clinical manifestations, diagnosis and management of major rheumatologic diseases.

**IDTH 204 Basic Pathological Mechanisms**  
29.14; 2 cr.  
The course covers the basic pathological mechanisms of disease at the cellular and molecular levels, their microscopic, gross and clinical manifestation, and some pharmacological interventions that apply to them.

**IDTH 205 Microbiology and Infectious Diseases**  
56.44; 5 cr.  
The course provides the principles and concepts of basic and medical microbiology. Emphasis is placed on the basic properties, pathogenesis, preventive measures and laboratory diagnosis of bacteria, viruses, parasites and fungi, and the clinical outcome, management and treatment of patients infected by these etiologic agents.

**IDTH 210 Fundamentals of Medical Research**  
40.10; 3 cr.  
The course provides first year medical students with their first exposure to research methodology. Fundamental principles and concepts of evidence-based medicine, epidemiology and biostatistics are presented and discussed.

**IDTH 211 The Blood**  
30.30; 3 cr.  
An integrated course that covers the anatomy, histology, physiology, pathology, pathophysiology and pharmacology related to the blood and lymphatic systems. Concepts in social medicine and global health, preventive medicine, epidemiology and medical ethics are explored in relation to diseases of the blood.

**IDTH 212 Endocrinology and Reproduction**  
46.36; 4 cr.  
An integrated course that covers the anatomy, histology, physiology, pathology, pathophysiology and pharmacology related to the endocrine and reproductive systems. Concepts in social
medicine and global health, preventive medicine, epidemiology and medical ethics are explored in relation to diseases of the endocrine and reproductive systems.

IDTH 213  Becoming a Doctor 1: Clinical Skills - I  
20.80; 4 cr.  
The course introduces students to the art of medicine: communication skills, history taking, physical examination and clinical reasoning. The course runs throughout the year and is closely integrated with the organ-system based courses being studied by the students, to integrate clinical and basic science knowledge and skills.

IDTH 214  Becoming a Doctor 2: Physicians Patients and Society - I  
19.19; 2 cr.  
The course explores the place of medicine, illness, suffering and the human body in human culture expressed through art, literature and history of medicine, and through close encounters with patients.

IDTH 215  Becoming a Doctor 3: Global Health and Social Medicine  
21.21; 2 cr.  
The course introduces students to central issues in the practice of social medicine and global health and the connection between them. It examines how social forces become embodied as pathologies, how political, economic, and historic trends influence the distribution of disease among different populations, and how new trends in the organization of care affect the most vulnerable members of society.

IDTH 216  Becoming a Doctor 4: Learning Communities  
0.36; 1 cr.  
The course covers topics and issues important for the personal and professional development of students, with emphasis on reflection. Students are encouraged to make use of experiences for shared learning, and to develop a sense of community and belonging, thus promoting well-being.

IDTH 225  The Liver and Gastrointestinal System  
40.40; 4 cr.  
An integrated course that covers the anatomy, histology, physiology, pathology, pathophysiology and pharmacology related to the liver and gastrointestinal tract. In addition, concepts in social medicine and global health, preventive medicine, epidemiology and medical ethics are explored in relation to diseases of this system.

IDTH 226  The Cardiovascular System  
40.40; 4 cr.  
An integrated course that covers the anatomy, histology, physiology, pathology, pathophysiology and pharmacology related to the cardiovascular system. In addition, concepts in social medicine and global health, preventive medicine, epidemiology and medical ethics are explored in relation to diseases of this system.

IDTH 227  The Respiratory System  
40.40; 4 cr.  
An integrated course that covers the anatomy, histology, physiology, pathology, pathophysiology and pharmacology related to the respiratory system. In addition, concepts in social medicine and global health, preventive medicine, epidemiology and medical ethics are explored in relation to diseases of this system.

IDTH 228  The Kidneys and Urinary System  
40.40; 4 cr.  
An integrated course that covers the anatomy, histology, physiology, pathology, pathophysiology and pharmacology related to the kidneys and urinary system. In addition, concepts in social medicine and global health, preventive medicine, epidemiology and medical ethics are explored in relation to diseases of this system.
**IDTH 229** The Skin 20.20; 2 cr.
This course integrates the anatomy, histology, physiology, pathology, pathophysiology and pharmacology related to the skin. Basic concepts are presented in which students are expected to learn the scientific basis of the normal physiology and pathology of the skin and its appendages including hair and nails as well as mucosal surfaces. Mechanisms of disease causation are illustrated with clinically relevant examples. Concepts in preventive medicine, epidemiology and medical ethics are explored in relation to diseases of the skin.

**IDTH 230** Brain and Cognition 80.80; 8 cr.
This course is intended to provide preclinical medical students with an integrated approach to the structure and function of the nervous system. Basic principles of neuroanatomy, neurocytology, neuroembryology, neuroradiology, neurophysiology, and neurology will be related to the function of the normal and diseased human nervous system, and the action of drugs. Concepts in social and preventive medicine, epidemiology and medical ethics are explored in relation to diseases of the nervous system.

**IDTH 231** Human Development and Psychopathology 40.40; 4 cr.
This is a multidisciplinary course that integrates human development, psychopathological processes and their underlying neural circuitries along with basic and clinical psychopharmacology and relevant ethical, professional and public health issues. It teaches psychopathology through a lifespan approach and uses a variety of teaching/learning techniques such as didactics, team based learning, case studies, and workshops.

**IDTH 232** Research Design and Development 10.80; 3 cr.
The aim of the course is to provide the opportunity to learn and apply research methods to investigate a local health problem. It will provide a hands-on research experience, building on the basic knowledge and skills learned in the Fundamentals of Medical Research course in Year 1. Students will learn the phases of the research process from conception to design, to implementation. Through a combination of class sessions, meetings with research advisors and independent work, students, in groups, will identify a local health problem that is of particular interest to them, and will design and conduct a study relevant to it.

**IDTH 233** Physicians Patients and Society – II 20.20; 2 cr.
This course explores medicine, illness, and suffering as seen through the lens of bioethics, spirituality in medicine, palliative care, and the nursing experience. It will bring together information related to the biophysical, psychological, humane, spiritual and social factors of illness - a holistic approach that focuses on the patient as a person.

**IDTH 224** Clinical Skills – II 20.50; 3 cr.
This course is a continuation of IDTH 213 and further develops the students’ communication skills, history taking, physical examination and clinical reasoning. It runs throughout the year and is closely aligned with the organ-system based courses being studied by the students in year 2 of medical school, to integrate clinical and basic science knowledge and skills.

**IDTH 225** Learning Communities – II 0.30; 1 cr.
The course covers topics and issues important for the personal and professional development of students, with emphasis on reflection. Students are encouraged to make use of experiences for shared learning, and to develop a sense of community and belonging, thus promoting well-being.
Fourth Year

In this clerkship, teams of senior medical students assess, critique, and propose solutions to problems of public health or clinical significance. The students examine policy, organizational, social, and individual challenges to these problems, addressing issues such as equity in health and setting public health programs, and identifying opportunities for change. Data collection and statistical analysis are secondary objectives.

IDTH 264  Capstone Course  10.70.
The two-week course aims to provide students with an opportunity to reflect on their undergraduate experience and the personal, social, emotional and practical issues of transition beyond medical school and graduate training or professional career. It deals with issues of ethics, law, insurance, social medicine, professionalism, life-long learning among many others.

Graduate Studies in Biomedical Sciences

The graduate program in Biomedical Sciences is designed to provide a multidisciplinary educational and training environment that will prepare students for independent research and teaching careers. It is centered in the Faculty of Medicine, where investigative collaborations among basic and clinical scientists are fostered. The program emphasizes concepts and state-of-the-art techniques of molecular and cellular medicine, and integrates students into the extensive and rapidly expanding translational research programs. Students may choose a discipline of study from the several research areas/programs offered by the Faculty of Medicine.

For general requirements about graduate study at AUB, refer to the Admissions section on page 33 of this catalogue.

MS Disciplines

- Biochemistry  Refer to page 497
- Human Morphology  Refer to page 491
- Microbiology and Immunology  Refer to page 505
- Pharmacology and Therapeutics  Refer to page 528
- Physiology  Refer to page 493
- Neurosciences (Interfaculty)  Refer to page 579
- Biomedical Engineering (Interfaculty)  Refer to page 481
- Scholar HeAlth Research Program (SHARP) (Clinical)  Refer to page 538
- Orthodontics (Clinical)  Refer to page 517

Admission to MS Programs

- Admission as a regular student  Refer to page 33
- Admission on probation  Refer to page 41
Course and Thesis Requirements

Students must complete a minimum of 21 credits of graduate course work with a minimum general average of 80. Graduate students who intend to apply to the medical program should complete 21 credits of graduate courses, 10 credits of which are not integral to the structured medical curriculum. Medical students and medical graduates who wish to join the MD–MS program are required to complete a minimum of 10 credits of graduate courses not integral to the structured medical curriculum and earn a minimum general average of 80. Those with a degree in dental or veterinary medicine are required to complete a minimum of 15 credits of graduate course work. In addition, all students must pass a comprehensive examination and complete a thesis project equivalent to 9 credits. The thesis must be presented and defended to the satisfaction of the examining committee.

Students following the non-thesis master's program are required to take a minimum of 30 graduate credit hours, 3 credits of which may be a project and should follow a course of study approved by the department/program and the concerned Faculty Graduate Studies Committee.

PhD Program

Mission

The mission of the Doctoral Program in Biomedical Sciences (DBMS) is to provide excellent educational and research opportunities for students to develop into independent researchers and educators who will enrich the research and teaching output from Lebanon, the Middle East and beyond. The program will provide the students with the theoretical foundations and the special skills and attitudes that will allow them to develop their critical thinking and creative potential, conduct high caliber research in the biomedical sciences, contribute to the advancement of science, uphold the principles of intellectual honesty, and become leaders in their chosen fields of study.

Program Objectives

Students are expected to:

- design and pursue pertinent research into biomedical science questions, by devising and implementing a research plan to test a novel hypothesis;
- generate and analyze data critically, and utilize such analysis in devising, revising and/or refining a research plan;
- communicate findings, in both oral and written formats, through presentations at scientific meetings, publications in peer-reviewed journals, and tutoring of junior students;
- demonstrate knowledge and integration of the fundamental principles of the various biomedical sciences;
- demonstrate theoretical and practical expertise in a specific field of research in the biomedical sciences;
- appreciate the complexity and the volume of emerging new scientific information and its technical components, and be able to cope with it and manage one's learning efficiently and effectively; and
- appreciate the importance of openness, teamwork and integrity in the advancement of knowledge through research.
PhD Disciplines

- Biochemistry and Molecular Genetics
- Biomedical Engineering
- Cell Biology of Cancer
- Microbiology and Immunology
- Neurosciences Program
- Nutrition (Interfaculty)
- Pharmacology and Toxicology
- Physiology

Academic Governance

Oversight of the DBMS Program occurs at three different levels: at the PhD Program Committee level with faculty representation from the department and program of study and the coordinator of the PhD Program; at the Faculty of Medicine Dean's Office, represented by the Faculty of Medicine Graduate Studies Committee; and at the university level through the Board of Graduate Studies.

Admission Requirements

Admission to the program will be on a competitive basis. Students eligible for admission to the DBMS must have a sound academic record (85% or its equivalent in the major field of study) and a demonstrated, genuine interest in biomedical research, and preferably with research experience.

Minimum requirements for admission into the program are:

- Students with a BS degree or its equivalent, in mathematics, biology, physics and chemistry in the Faculty of Arts and Sciences, as well as advanced courses in other medical science disciplines, and preferably with research experience, are eligible to apply (accelerated track PhD). Applicants with other degrees such as Masters (MS), Medical Doctor (MD), Pharmacist (Pharm D or equivalent), Veterinarian Doctor (VMD), Dental Doctor (DMD, DDS), will also be considered for admission into the program (regular track PhD).
- Provide three letters of recommendation.
- General Graduate Record Examination (GRE) less than 5 years old (applicant can use unofficial scores in the application and send the official copy after the application submission deadline). Total score of minimum 304 (equivalent to 1100 converted old GRE score) in the verbal and quantitative reasoning sections of the GRE test. Applicants to the graduate program, other than AUB graduates and graduates of colleges or universities recognized and located in North America, Great Britain, Australia, and New Zealand, must meet the English Language Proficiency Requirement (ELPR). Refer to catalogue section on English Language Proficiency Requirement page 37.
- Provide a personal statement (500 words maximum).
- Be interviewed by the PhD Committee members.
- Be recommended for admission by the PhD Committee.

FM accepts applications for PhD during fall and in the early application cycle.
Financial Support

The PhD program offers, on a competitive basis, substantial support which fully covers tuition and includes a monthly stipend and housing. In return, students are expected to help in teaching and in proctoring exams.

Program Requirements

50 credit hours of course work beyond the bachelor’s program, or 29 credit hours of course work beyond the master’s program, are required. To fulfill course requirements, 16 required core courses (34 credits), in addition to elective courses are offered. A maximum of 21 credit hours may be transferred from the master’s work if considered within the scope of the program. Students are expected to register for 24 credits of thesis.

Upon admission into the program, each student will be advised by the coordinator of the PhD program. After the first year, each student will have selected a thesis advisor who will design the set of elective courses to meet the student's research interests and career goals. Each student's course of study will be designed individually, in light of the student's interests and career goals. All the duties of the coordinator of the PhD program will be transferred to the student's thesis advisor, who must be selected no later than the end of the first year for students entering into an MS program.

For other elective courses, refer to MS disciplines:

- BIOC Courses: Refer to page 497
- HUMR Courses: Refer to page 491
- PHYL Courses: Refer to page 493
- IDTH Courses: Refer to page 495
- PHRM Courses: Refer to page 528
- MBIM Courses: Refer to page 505

\(^1\) Students must choose at least one of these courses as an elective.
Course Descriptions

BIOM 375 Principles of Learning and Assessment 28.0; 2 cr.
This course provides students with the theoretical background and approaches to teaching science at the university level with emphasis on the nature of science and learner cognition. In addition, students are expected to apply principles and techniques of teaching and assessment of science in a teaching context. This course is a core course for PhD students in Biomedical Sciences and is an elective for MS students. First semester.

BIOM 385 Research Ethics 15.0; 1 cr.
This course introduces the fundamentals of responsible conduct of research, emphasizing the ethical practice of human research. The course recaps history of ethical principles, the development of research codes of conduct and ethical practices, familiarizes students with the different kinds of ethical issues that they might come across throughout their careers, and allows scholars to reflect critically about what it means to be an ethical and responsible researcher. Summer semester.

BIOM 480 Qualifying Exam Part I: Comprehensive Exam 0 cr.
All students admitted to the PhD program must successfully complete a comprehensive examination. The purpose of the comprehensive exam is to ascertain the student’s knowledge in his/her field of specialization and related areas. The exam will cover major topics from within the concentration area and related fields.

Students who do not pass the comprehensive exam may, upon the recommendation of the thesis committee, take it for a second time in the following semester. Failure on the second attempt will result in the student’s discontinuation from the PhD program.

BIOM 481 Qualifying Exam Part II: Defense of Thesis Proposal 0 cr.
All students must successfully complete a qualifying examination, which is to be taken at least two semesters prior to the final defense of the PhD thesis. The qualifying exam, administered by the thesis committee is an oral exam in which the student presents his/her research proposal.

The objective of the oral exam is to determine whether the candidate's proposal and methodology are adequate for a PhD thesis. The candidate must show positive preliminary results and considerable promise of original research. It is the responsibility of the student to inform and update the thesis committee members about his/ her research progress, especially during the period between the comprehensive and qualifying exams. Students who do not pass the qualifying exam are allowed to take it for a second time in the following semester. Failure on the second attempt will result in the student’s discontinuation from the graduate program.

BIOM 491 PhD Laboratory Rotations 0.30; 1 cr.
During the first year of study, PhD students in Biomedical Sciences must take a minimum of two laboratory rotations (1 credit each) in different faculty research laboratories within the Faculty of Medicine. Students may also enroll in the summer in a third elective laboratory rotation (1 credit). This course aims to familiarize students with potential thesis mentors and to expose them to different research environments. Open to PhD students in Biomedical Sciences. First and second semesters and summer.
BIOM 499  PhD Thesis  24 cr.
A/B/C/D/E

In partial fulfillment of the requirements for the degree of doctor of philosophy, a student must submit a thesis (equivalent to 24 credit hours) that is expected to make a significant and original contribution to his/her field of research.

PhD Thesis Requirements

Thesis Committee
The PhD Thesis Committee should consist of at least five members; two members should be from outside AUB, and the chair of the PhD Thesis Committee should be a faculty member in a rank of a full professor and different from the thesis advisor. Refer to PhD Thesis Committee under General University Academic Information, page 66.

Thesis Defense
After qualifying as a PhD candidate, the student will focus on the doctoral research with continued participation in seminars. The doctoral research, once completed, will be presented publicly and defended immediately in front of the PhD Thesis Committee. Prior to the defense, all major revisions to the thesis must be completed. The decision of the committee will be by consensus. Refer to PhD Thesis Defense under General University Academic Information, page 59 Publication Requirements.

PhD students should have published or have in press one journal publication and one abstract in an international conference related to their thesis topics.

Candidacy and Residency Requirements
All students admitted to the PhD program must successfully complete qualifying exam part I (written) and qualifying exam part II (oral defense of thesis proposal).

To satisfy the minimum residency requirements for the PhD degree, all students must register and be in residence for at least three years beyond the completion of the master’s degree. The requirements for the degree of Doctor of Philosophy must be completed within a period of 5 years after joining the PhD program. Extension beyond the 5-year period will require Graduate Council approval upon the recommendation of the Faculty Graduate Studies Committee.

Graduation Requirements
To earn a PhD degree in Biomedical Sciences, a student must fulfill the following graduation requirements:

- attain a minimum cumulative average of 85 at the PhD level;
- pass qualifying exams part I and II;
- pass the PhD thesis defense;
- satisfy the minimum residency requirements;
- have a publication in a leading international journal, based on the PhD research;
- have at least one accepted abstract in an international conference, based on the PhD research; and
- satisfy all pertinent AUB regulations.
In addition to the AUB general requirements for graduate study, the Faculty of Medicine graduate study requirements and regulations are as follows:

- **Application and Notification of Acceptance.** For application submission deadlines and admissions decision notification, refer to Application Procedures under Admissions section on page 37.

- **Acceptance.** Acceptance offers are issued in duplicates including category offered, registration period, and date of start of classes. These dates are mentioned in the University Calendar issued annually by the Office of the Registrar.

Candidates must sign a copy of the above letter, indicating acceptance, and return it to the Office of Admissions in the due date. If acceptance letters are not signed and sent back by the set deadline, positions will be reassigned to candidates on the waiting list.

- **Periods of Study.** The graduate program, once initiated, proceeds without interruption through the first semester, the second semester, and the summer session.

- **Transfer Students.** See Transfer of Credits into a PhD Degree Program under General University Academic Information section on page 54.

- **Categories of Graduate Students.** The categories applicable at the University in general are also applicable in the Faculty of Medicine with the following modifications: **regular graduate student status,** applicable to students with a cumulative undergraduate average in the major field of study of at least 80 or its equivalent; and **graduate on special status,** applicable to students with a cumulative undergraduate average in the major field of study or an overall average of 75 or higher but lower than 80 or equivalent. **Graduates on probation status** are transferred to regular status upon achieving an overall average of at least 80 in 9 credits of graduate courses within two semesters.

- **Visiting Graduate Students:** Applicable to students who pay a fee to attend a period of observership in an ongoing research project.

- **Exchange students:** Applicable to students who participate in the graduate program in accordance with formal agreements between the Faculty of Medicine and other institutions.

In all instances, candidates must submit applications which are reviewed and acted upon by the Graduate Studies Committee.

### Leave of Absence

See Leave of Absence under General University Academic Information section on page 49.

### Interdepartmental Courses – Graduate Program

**IDTH 301**  
**Introduction to Medical Science Literature**  
16.32; 2 cr.  
A multidisciplinary approach to the use of medical science publications (open to beginning graduate students in the Faculty of Medicine).

**IDTH 302**  
**Methods**  
16.64; 3 cr.  
Theory and practice of techniques used in the various disciplines of medical sciences.
IDTH 303/304/305/306  Integrated Graduate Course I–IV 32; 0; 2 cr. (each)
An integrated lecture seminar course introducing graduate students to the thinking in various medical science disciplines (required of all PhD students in the Faculty of Medicine). *Four semesters. One two–hour session a week each.*

IDTH 307  Biomedical Electronics 32.16; 3 cr.
An introductory course in electricity and electronics as applied to biology and medicine. *Alternate years.*

IDTH 308A  Neuroanatomy 31.27; 3 cr.
A course similar to the first part of 208, offered to graduate students, covering the normal structure of the human nervous system. See Department of Human Morphology. *Three weeks.*

IDTH 308B  Neurophysiology 31.27; 3 cr.
A course similar to the second part of 208, offered to graduate students, covering the function of the human nervous system. See Department of Physiology. *Three weeks.*

IDTH 309  Biology of Nerve and Muscle 48.0; 3 cr.
A multi-disciplinary study of anatomy, physiology, biochemistry, pharmacology, and pathology of nerve and muscle. *Alternate years.*

IDTH 310  Basic Pathological Mechanisms 29.14; 2 cr.
The course covers the basic pathological mechanisms of disease at the cellular and molecular levels, their microscopic, gross and clinical manifestation, and some pharmacological interventions that apply to them.

IDTH 311  Foundations of Biomedical Science 90.40; 7 cr.
An interdisciplinary course that presents the cellular and molecular concepts and principles that underlie the normal structure and function of the human body. It covers cellular structure and function, including mechanisms and regulation of gene expression, protein synthesis, structure and function, signaling mechanisms, membrane transport, energy metabolism, contractility, and excitability, and the basic principles of drug action.

IDTH 317  Perspectives in Medical Sciences 32.0; 2 cr.
A course of selected readings and seminars in the history, philosophy, and methodology of medical and related sciences.

IDTH 319/320  Integrated Research Seminars 16.0; 1 cr. (each)
Participation of all PhD students and professors.

IDTH 330  Medical Pedagogy 3 cr.
A tutorial in teaching methods and practical experience under supervision. *Open to PhD candidates only.*

IDTH 333/334  Projects 2 cr. (each)
Two months half-time in a department other than the student’s major occurring toward the end of the PhD candidate’s residency.
Biomedical Engineering Graduate Program

Coordinator: Dawy, Zaher (Electrical & Computer Engineering, FEA)
Co-coordinator: Jaffa, Ayad (Biochemistry & Molecular Genetics, FM)
Coordinating Committee Members:
Darwiche, Nadine (Biochemistry & Molecular Genetics, FM)
Khoeiry, Pierre (Biochemistry & Molecular Genetics, FM)
Mhanna, Rami (Biomedical Engineering, FEA)
Oweis, Ghanem (Mechanical Engineering, FEA)

Background

The Biomedical Engineering Graduate Program (BMEP) is a joint FEA and FM interdisciplinary program that offers two degrees: Master of Science (MS) in Biomedical Engineering and Doctor of Philosophy (PhD) in Biomedical Engineering. The BMEP is housed in the FEA and administered by both FEA and FM via a joint program coordinating committee (JPCC).

The mission of the BMEP is to provide excellent education and promote innovative research enabling students to apply knowledge and approaches from the biomedical and clinical sciences in conjunction with design and quantitative principles, methods, and tools from the engineering disciplines, to address human health related challenges of high relevance to Lebanon, the Middle East, and beyond. The program prepares its students to be leaders in their chosen areas of specialization committed to lifelong learning, critical thinking, and intellectual honesty.

The curricula of the MS and PhD degrees are composed of core and elective courses balanced between biomedical sciences and engineering and between fundamental and applied knowledge.

The curricula include the following three research focus areas:

- **Biomedical Systems**: This focus area includes research directions such as devices, instrumentation, biomechanics, biomaterials, drug delivery systems, and tissue engineering.
- **Biomedical Cybernetics**: This focus area includes research directions such as biomedical and health informatics, computational biology, biomedical signal/image processing, and biomedical systems engineering.
- **Cardiovascular and Pulmonary Engineering**: This focus area includes research directions such as fluid mechanics, modeling, simulation, imaging, devices, and implants related to both human cardiovascular and pulmonary systems.

A student may select his/her courses to satisfy the requirements of one of the three focus areas.

The MS and PhD degrees are open to students holding degrees from relevant fields of study including basic sciences, biomedical sciences, computer science, engineering, health sciences, and mathematics. Due to the interdisciplinary nature of the program, remedial undergraduate courses in both sciences and engineering have been identified to cover the needed prerequisite knowledge, customized per student on a case-by-case basis. Remedial undergraduate courses do not count as credit towards the MS or PhD degree completion.
Master of Science in Biomedical Engineering

The BMEP offers a Master of Science (MS) degree in Biomedical Engineering with two options: Thesis option and non-thesis option.

Admission Requirements

The application procedures and admission requirements to the MS program follow AUB’s General University Academic Information as documented in the Graduate Catalogue. To be considered for admission, applicants must hold a Bachelor’s degree in a relevant field of study from AUB or its equivalent from a recognized institution of higher learning.

Accepted students in the thesis option are eligible to apply for Graduate Assistantship (GA) and Graduate Research Assistantship (GRA).

Course Requirements

The MS program consists of 30 credits. The curriculum design is divided into core courses and elective courses in addition to a master thesis for the thesis option. This program does not provide credit towards New York State licensure.

Core graduate courses: 18 credits of core courses from biomedical sciences and engineering.

**Free elective graduate courses for the non-thesis option:** 6 credits additional elective courses. These courses should be taken from engineering and should be approved by the student's advisor and the joint program coordinating committee.

**Master thesis for the thesis option:** 6 credits master thesis in biomedical engineering. The thesis requirements follow AUB’s General University Academic Information as documented in the Graduate Catalogue.

## PhD in Biomedical Engineering

### Admission Requirements

The application procedures and admission requirements to the PhD program follow AUB’s General University Academic Information as documented in the Graduate Catalogue. To be considered for admission, applicants must hold Bachelor's or Master's degree in a relevant field of study from AUB or its equivalent from a recognized institution of higher learning.

Acceptance into the PhD program is determined by academic performance as well as an assessment of readiness, potential and ability to develop into independent researchers as judged by interviews by faculty members, a written statement, letters of recommendation, GRE scores, and other means of assessment such as publications and industrial experience.

Accepted students are eligible to receive scholarships that cover fully their tuition fees and that provide a monthly stipend.

### Degree Requirements

**General requirements for Master's degree holders:** Based on AUB’s guidelines, a minimum of 48 credit hours beyond those required for the Master’s degree, of which a minimum of 18 credit hours must be in graduate level course work and a minimum of 24 credit hours of thesis work. Requirements also allow a maximum of three credit hours out of the 18 credits of course work as tutorial course, and include zero credit comprehensive examination preparation course and zero credit thesis proposal preparation course.
General requirements for Bachelor’s degree holders: Based on AUB’s guidelines, a minimum of 78 credit hours beyond those required for the Bachelor’s degree, of which a minimum of 36 credit hours must be in graduate level course work and a minimum of 30 credit hours of thesis work. Requirements also allow a maximum of six credit hours out of the 36 credits of course work as tutorial courses, and include zero credit comprehensive examination preparation course and zero credit thesis proposal preparation course.

To earn a PhD degree in Biomedical Engineering, the student must complete the following requirements:

- Satisfy the course and research credit requirements
- Satisfy the residence requirement and all other pertinent AUB regulations
- Have at least one international refereed journal article based on the PhD thesis
- Have at least one refereed conference paper based on the PhD thesis
- Have a cumulative average of 85 or above
- Pass the comprehensive and oral qualifying examinations
- Successfully defend the PhD thesis

The following are the graduate level course requirements for students admitted with a Bachelor’s degree. The total number of credits is at least 36 credits divided among core, restricted elective, and free elective courses. Students’ admitted with a Master’s degree can waive as many courses as possible without going below the minimum required 18 credits of course work.

Core graduate courses: 21 credits of core courses from biomedical sciences and engineering.

Free elective graduate courses: At least 6 credits additional elective courses. These courses should be taken based on the student's specific area of research as approved by the PhD thesis advisor.

Course Descriptions

**BMEN 600 Biomedical Engineering Applications** 3 cr.

Biomedical engineering is an interdisciplinary domain which applies principles of engineering to find solutions for biological and health problems. Biomedical engineering aims to improve our fundamental understanding of biological processes and develop approaches for optimized therapeutic/diagnostic healthcare procedures. The field of biomedical engineering involves the development of materials to replace or enhance the operation of damaged or malfunctioning biological entities, development of diagnostic and therapeutic tools, modeling of biological systems, signal processing and bioinformatics. This course will introduce students to biomedical engineering and will provide insight on the various applications in the biomedical engineering field. The course will be divided into modules and each will be given by a specialist in a certain biomedical engineering area.

\(^1\) Students are required to take two courses from the following groups depending on their focus area: \{A1, A2, A3, A4\}, \{B1, B2, B3, B4\}, and \{C1, C2, C3, C4, C5\).
BMEN 601  Computational Modeling of Physiological Systems  3 cr.
This course focuses on the quantitative modeling of different physiological systems. It provides students with current concepts of the mathematical modeling, different quantitative descriptions of cellular and organ physiology. At the subcellular/cellular level, we will examine mechanisms of regulation and homeostasis. At the system level, the course will cover basic aspects of anatomical and pathophysiological features of the nervous, neural, cardiovascular and respiratory systems. Several physiological processes are treated as case studies for increasing complexity in modeling dynamical systems.

BMEN 602  Computational Modeling of Cardiovascular and Pulmonary Systems  3 cr.
The needs for better understanding of mechanics and the tools for computational modeling of Cardiovascular and Respiratory Systems in healthy and diseased conditions are constantly increasing. This is a result of the enormous advances that have been made in the science and engineering of both surgical and therapeutic medicine. This course covers the modeling and simulation of cardiovascular and respiratory systems. It will provide the students with a thorough understanding of the anatomy, physiology and mechanics of cardiovascular and respiratory systems as well as the computational tools for modeling and simulation of cardiac, circulatory, and respiratory systems in healthy and diseased conditions.

BMEN 603/CHEN 675  Tissue Engineering  3 cr.
In a world of aging population, an ever increasing demand for improvement of healthcare services and need for replacement organs and tissues is arising. The limited pool of donors together with the problem of donor organ rejection is a strong driver for engineering tissues and other body parts. Tissue engineering is an interdisciplinary field that uses cells, biomaterials, biochemical (e.g. growth factors) and physical (e.g. mechanical stimulation) signals, as well as their combination to generate tissue-like structures. The goal of tissue engineering is to provide biological substitutes that can maintain, restore or improve the function of damaged organs in the body. This course will introduce interested students to the new field of tissue engineering and provide insight on cutting edge applications in this area.

BMEN 604/CHEN 673  Engineering of Drug Delivery Systems  3 cr.
This course focuses on recent advances in the development of novel drug delivery systems. The fundamentals of drug delivery are discussed. Various strategies to tune and control the release of active agents for optimized therapeutic outcomes are explored. The course covers polymers and techniques used to produce drug nanoparticles, with specific examples of nanoparticle-based drug delivery systems. Prerequisites: CHEN 411; or consent of instructor.

BMEN 605  Biomedical Imaging  3 cr.
This course will provide students with an overview of the key concepts behind the main imaging modalities used in diagnostic imaging. Focus will be on explaining the physical principles and algorithms underlying X-ray imaging, computed X-ray tomography, magnetic resonance imaging, single-photon emission tomography, positron emission tomography and ultrasound imaging. The students learn the theoretical bases underlying the common forms of medical imaging as well as the limitations and the applicability of such procedures.

BMEN607  Biomechanics  3 cr.
A course on the study of the biomechanical principles underlying the kinetics and kinematics
of normal and abnormal human motion. Emphasis is placed on the interaction between biomechanical and physiologic factors (bone, joint, connective tissue, and muscle physiology and structure) in skeleto-motor function and the application of such in testing and practice in rehabilitation. The course is designed for engineering students with no previous anatomy/physiology. Prerequisite: CIVE 210, MECH 320 or CIVE 310; or consent of instructor.

**BMEN 606**  
**Computational Genomics**  
1 cr.  
This course will discuss the relationships among sequence, structure, and function in biological networks as well as advances in modeling of quantitative, functional, and comprehensive, genomics analyses. It will assess computational issues arising from high-throughput techniques recently introduced in biomedical sciences, and cover very recent developments in computational genomics, including genome structural variant discovery, epigenome analysis, cancer genomics, and transcriptome analysis.

**BMEN 671**  
**PhD Lab Rotation**  
1 cr.  
PhD students in Biomedical Engineering are required take two laboratory rotations (1 credit each) in different faculty research laboratories within the FEA and/or FM. Students may also enroll in a third elective laboratory rotation. This aims to familiarize students with potential thesis mentors and to expose them to different research environments.

**BMEN 672**  
**Hospital Lab Rotation**  
0 cr.  
PhD students in Biomedical Engineering are required to do a lab rotation in the Biomedical Engineering Department at AUB Medical Center (AUBMC). This aims to familiarize students with the typical activities and responsibilities of a biomedical engineer in a working environment and to expose them to different equipment and tools.

**BMEN 673L**  
**Biomedical Engineering Lab**  
1 cr.  
This laboratory course aims to introduce students to the practical issues in the areas of biomedical instrumentation design and biological signal processing. A particular emphasis will be placed on signal transduction, electronic circuit design for recording and conditioning physiological signals. The lab will introduce hand-on laboratory experiments on biomedical sensors, analog signal amplifiers and filters, digital acquisition and transmission, and basic digital filtering. In addition, some experiments cover topics that demonstrate the various levels of complexity that characterize biological signals. Signal processing tools include spectral and cepstral analysis, de-noising and artifact removal, filter banks and wavelet decompositions, Hilbert transforms, and information-theoretic measures.

**BMEN 674L**  
**Biomedical Sciences Lab**  
1 cr.  
A guided laboratory course in research methods used in cell biology and physiology.

**BMEN 675**  
**Approved Experience**  
0 cr.

**BMEN 678**  
**Special Topics in Biomedical Engineering**  
3 cr.

**BMEN 679**  
**Special Topics in Biomedical Engineering**  
1 cr.

**BMEN 680**  
**MS Comprehensive Exam**  
0 cr.  
Every semester.
BMEN 681  MS Thesis  6 cr.  
Every semester.

BMEN 690  Qualifying Exam Part I: Comprehensive Exam  0 cr.  
Every semester.

BMEN 691  Qualifying Exam Part II: Defense of Thesis Proposal  0 cr.  
Every semester. Prerequisite: BMEN 690.

BMEN 692  PhD Thesis  3 cr.  
Every semester. Taken while total required credit hours have been completed.

BMEN 693  PhD Thesis  6 cr.  
Every semester. Taken while total required credit hours have not been completed.

BMEN 694  PhD Thesis  9 cr.  
Every semester. Taken while total required credit hours have not been completed.

BMEN 695  PhD Thesis  12 cr.  
Every semester. Taken while total required credit hours have not been completed.

BMEN 696  PhD Thesis  0 cr.  
Every semester. Taken while total required credit hours have not been completed.

BMEN 697  PhD Thesis Defense  0 cr.  
Every semester. Prerequisite: BMEN 691.

BIOC 321  Nucleic Acids and Basic Genetics  15.0; 1 cr.  
This course discusses the principles of nucleic acids structure and function in eukaryotes. It includes the information for basic genetics in terms of genome structure as well as the diversity of gene regulation. Required from MS and PhD students in Biomedical Sciences. Requires consent of coordinator for other graduate disciplines. First semester.

BIOC 322  Protein Biochemistry  10.10; 1 cr.  
This course deals with the biochemistry of proteins including their basic units, different structures, folding process and protein-protein interactions. It focuses on how changes at the structural level modify function. The course also covers the principles of protein purification and sequencing and introduces students to protein database, molecular modeling and systems biology. Required from MS and PhD students in Biomedical Sciences. Requires coordinator approval for other graduate disciplines. First semester.

BIOC 325  Receptors and Signal Transduction  25.10; 2 cr.  
This course covers classical pathways involved in receptor signaling and activation of downstream targets and the molecular mechanisms involved. It deals with the inter- and intracellular communication, from the generation of signaling molecules through the cellular responses. Required from MS and PhD students in biomedical sciences. Requires consent of coordinator for other graduate disciplines. First semester.
BIOM 385  Research Ethics  15.0; 1 cr.
This course introduces the fundamentals of responsible conduct of research, emphasizing
the ethical practice of human research. The course recaps history of ethical principles, the
development of research codes of conduct and ethical practices, familiarizes students with
the different kinds of ethical issues that they might come across throughout their careers,
and allows scholars to reflect critically about what it means to be an ethical and responsible
researcher.  
Summer semester.

EECE 601  Biomedical Engineering I  3 cr.
This course includes an introduction to: general instrumentation configuration, performance of
instrumentation systems; types and characteristics of transducers; sources and characteristics
of bioelectric signals; types and characteristics of electrodes; temperature regulation and
measurement; cardiovascular system, measurements, and diagnostic equipment; blood
instruments; patient care and monitoring; and electrical safety of medical equipment.  
Prerequisites: BIOL 210 or BIOL 202 or PHYL 246, and EECE 210; or PHYS 228 and PHYS 228L; or
consent of instructor.

EECE 603  Biomedical Signal and Image Processing  3 cr.
Fundamentals of digital signal processing as implemented in biomedical applications. It
provides a concise treatment of the tools utilized to describe deterministic and random
signals as the basis of analyzing biological signals: data acquisition; imaging; denoising and
filtering; feature extraction; modeling. The course is tightly coupled with a practical component
through laboratory projects. Examples include the auditory system, speech generation,
electrocardiogram, neuronal circuits, and medical imaging. Students should have reasonable
software skills in Matlab.  
Prerequisites: STAT 230 and EECE 340, or equivalent; or consent of
instructor.

EECE 633  Data Mining  3 cr.
This course is an introduction to data mining. Data mining refers to knowledge discovery
from huge amounts of data to find non-trivial conclusions. Topics will range from statistics to
machine learning to database, with a focus on analysis of large data sets. The course will target
at least one new data mining problem involving real data, for which the students will have to
find a solution.  
Prerequisite: EECE 330 or consent of instructor.

EECE 663  System Identification  3 cr.
This course introduces the basic mathematical tools to fit models into empirical input-output
data. General time-series modeling and forecasting, such as stock prices, biological data and
others. Topics include nonparametric identification methods: time and frequency response
analysis; parametric identification: prediction error, least squares, linear unbiased estimation
and maximum likelihood; Convergence, consistency and asymptotic distribution of estimates;
properties and practical modeling issues: bias distribution, experiment design and model
validation.

EECE 667  Pattern Recognition  3 cr.
The course provides an overview of the algorithms used in machine learning. The course
discusses modern concepts for model selection and parameter estimation, decision making
and statistical learning. Special emphasis will be given to regression and classification for
supervised mode of learning. Students will be assigned typical machine learning problems to
investigate as projects.
**EECE 693  Neural Networks**  
3 cr.  
The course provides a comprehensive foundation to artificial neural networks and machine learning with applications to pattern recognition and data mining; learning processes: supervised and unsupervised, deterministic and statistical; clustering; single layer and multilayer perceptrons; least-mean-square, back propagation, and Al-Alaoui algorithms; radial-basis function networks; committee machines; principal component analysis; self-organizing maps; and current topics of interest.

**EPHD 310  Basic Biostatistics**  
2.2; 3 cr.  
An introductory Biostatistics course that covers basic concepts in statistical methods. The course demonstrates methods of exploring, organizing, and presenting data. The course presents the foundation of statistical inference from estimation, to confidence interval and testing of hypothesis. Applications include comparing population means or proportions via data obtained from paired or independent samples, one-way ANOVA. Also, it introduces simple linear regression, correlations, logistic regression and nonparametric methods for data analysis.

**HUMR 305  Cell and Tissue Biology**  
30.33; 3 cr.  
Consists of the first half of Basic Histology, HUMR 209, covering cells and tissues. *Open to graduate students outside the department.*

**HUMR 314  Research Seminar**  
0.32; 1 cr.  
Presentation and discussion of timely research topics designated by members of the department.

**MECH 634  Biomaterial and Medical Devices**  
3 cr.  
A course that examines the structure-property relationships for biomaterials and the medical applications of biomaterials and devices. The first part of the course focuses on the main classes of biomaterials, metal, ceramic, polymeric, and composite implant materials, as well as their interactions with the human body (biocompatibility). The second part of the course examines the various applications of biomaterials and devices in different tissue and organ systems such as orthopedic, cardiovascular, dermatology, and dental applications. Experts from the medical community will be invited to discuss the various applications. *Prerequisite: MECH 340 or consent of instructor.*

**PHYL 246  Human Physiology for Paramedical and Undergraduate Students**  
48; 4 cr.  
Outlines fundamental principles of human physiology and the mechanisms governing the function of different body organs. *Prerequisites: BIOC 246 and BIOL 201 (or BIOL 210).*

**PHYL 302  Cardiovascular Physiology**  
31.6; 2 cr.  
Presents the cardiovascular system with clear reference to pathophysiological and clinical events. Didactic lectures and seminar sessions define physiological concepts and emphasize structure-function relationships. Laboratory sessions familiarize the student with instrumentation and techniques in the cardiovascular field. *Open to all graduate students in the department.*
